THE MISSION OF THE RANCHO SANTIAGO COMMUNITY COLLEGE DISTRICT IS TO PROVIDE QUALITY EDUCATIONAL PROGRAMS AND SERVICES THAT ADDRESS THE NEEDS OF OUR DIVERSE STUDENTS AND COMMUNITIES.

Approved by the Board of Trustees on April 1, 2013
Planning is a process that has become a staple of American Higher Education. At present, almost all colleges and universities engage in multiple forms of planning to accomplish specific purposes. There are many levels and variations of planning and it has typically evolved from a top-down hierarchical process to one that is more broadly inclusive of participation and input from different levels of the organization. Some plans are focused on the present and near future while others have a longer perspective.

The Rancho Santiago Community College District (RSCCD) Comprehensive Master Plan is a long-range plan that is intended to document what the district intends to achieve based on an internal and external analysis of demographic data and on the identified needs of the constituents and communities it serves.

The Comprehensive Master Plan includes summaries of the educational and facilities master plans for both Santa Ana College (SAC) and Santiago Canyon College (SCC). It is intended to document the development of RSCCD District Goals that will then be used to create more specific objectives. These strategic objectives will form the content of the RSCCD Strategic Plan and they will be used to guide annual resource allocation priorities within the district.

As a long-range plan, the RSCCD Comprehensive Master Plan covers a cycle that is roughly linked to the U.S. Census. That is, the Comprehensive Master Plan is intended to be rewritten after the data for each decennial census are released. Based on that demographic information and on other information sources, a new plan is released to cover a ten-year period. Because demographics often change and new conditions and trends can emerge rapidly, most of the other district and college plans cover shorter periods of time and are well positioned to address such changes if they occur. Although it is on a ten-year cycle, there are periodic updates of the RSCCD Comprehensive Master Plan.

Aside from the reasons mentioned above, the RSCCD Comprehensive Master Plan has several other purposes. The RSCCD Comprehensive Master Plan is one tool that the district and colleges can use to ensure that continuous progress is being made in fulfilling the RSCCD Mission Statement and the SAC and SCC Mission Statements. As such, this document is responsive to the Accreditation Standards and the planning requirements contained within those standards. The RSCCD Comprehensive Master Plan also serves to inform the public about the reasons why the district and the colleges are pursuing particular courses of action.
As with any collaborative document, there are many contributors to the final product. The members of the RSCCD Planning and Organizational Effectiveness Committee provided crucial input and served a vital review function. John Didion, the Executive Vice Chancellor, Human Resources & Educational Services, lent his usual good humor to the project and kept the development process moving and on track. The two planning consultants from HMC Architects, Deborah Shepley and Eva Conrad, provided the structure, the data, and the analysis that is infused throughout this document.

As espoused in our Mission Statement, the Rancho Santiago Community College District is focused on providing quality educational programs and services that address the needs of our diverse students and communities. The RSCCD Comprehensive Master Plan assists our district in maintaining its focus on that significant purpose.
The Rancho Santiago Community College District 2013 Comprehensive Master Plan is a long-term plan that describes RSCCD’s projections and goals for the coming decade. As such, this plan is a central element in RSCCD’s ongoing and systematic cycle of evaluation, integrated planning, resource allocation, implementation, and re-evaluation. This plan includes the identification of current and anticipated challenges; RSCCD’s Goals for the coming decade; summaries of the colleges’ educational and facilities master plans; and plans for RSCCD’s facilities not included in the colleges’ facilities master plans. Refer to the Rancho Santiago Community College District Planning Design Manual 2012 for greater detail on RSCCD’s planning processes.

Chapter 1 sets the stage for the ensuing dialogue by describing RSCCD sites and services. RSCCD is a multi-college district that is one of the largest community college districts in California that served 27,910 credit students and 16,222 non-credit students in fall 2012. The district includes two colleges, one of the state’s oldest community colleges, Santa Ana College, and one of its newest, Santiago Canyon College.

Although the nation, state, and local economy have been impacted by the most serious fiscal downturn since the 1930’s, economists are currently predicting a slow but steady recovery over the next five years. The economic decline places new pressures on today’s community colleges, which are now called upon to continue provide quality higher education while simultaneously addressing five powerful and inter-related challenges.

1. Increase in Student Demand
2. Emphasis on Degree and Certificate Completion
3. California Achievement Gap
4. Adult Education Challenge
5. Fiscal Challenge
Chapter 2 of this comprehensive master plan presents and analyzes internal and external scans data to assess RSCCD’s effectiveness in fulfilling its mission and to identify the challenges that are likely to arise in the next decade. RSCCD is located in a densely populated portion of Orange County, which is projected to increase 6% between 2010 and 2020. Multiple indices provide evidence that these residents' needs for RSCCD’s services will remain high, such as the low proportion of residents who speak only English at home in four of the communities served by RSCCD; the relatively low median household income in three of the communities served by RSCCD; and relatively high proportion of adults who have not attended college in three of the communities served by RSCCD.

The colleges’ credit students reflect the racial/ethnic diversity of the service area population. The credit students fit a typical college student profile: the majority are below 30 years of age and express a traditional educational goal of achieving an associate degree or transfer without a degree. However, the majority of these students who complete placement testing in English and mathematics upon entry into the colleges score below transfer level. The race/ethnicity of these degree-earners is proportional to the representation of those race/ethnicity groups in the total student population. The college’s students who take non-credit courses are predominately Hispanic and female, with the largest proportion of students between ages 30 and 64.

The data analysis presented in Chapter 2 led to the identification of five current and anticipated challenges that mirror the five challenges for community colleges across the state:

1. How can RSCCD serve a greater number of students?
2. How can RSCCD support student completion of degrees and certificates?
3. How can RSCCD support all students’ success?
4. How can RSCCD meet the community’s needs for adult education?
5. How can RSCCD meet the increasing and wide-ranging needs of its communities with reduced levels of state funding?
Chapter 3 presents the RSCCD Goals that were developed as a response to these five challenges. The goals are broad enough to be relevant through the next decade yet specific enough to provide clear direction for planning across all RSCCD entities. These goals unify RSCCD’s collective energies and serve as a guide for decision-making and the use of resources for the next ten years. The RSCCD Goals for the term of this comprehensive master plan are:

**RSCCD GOAL 1:** RSCCD will assess the educational needs of the communities served by RSCCD and will adjust instructional programs, offerings, and support services and will allocate resources as needed to optimize the alignment of students’ needs with services and fiscal resources.

**RSCCD GOAL 2:** RSCCD will assess the educational needs of the communities served by RSCCD and then pursue partnerships with educational institutions, public agencies, non-profit organizations, and business/industry/labor to collaboratively meet those needs.

**RSCCD GOAL 3:** RSCCD will annually improve the rates of course completion and completion of requirements for transfer, degrees, certificates, and diplomas.

**RSCCD GOAL 4:** RSCCD will support innovations and initiatives that result in quantifiable improvement in student access, preparedness and success.

**RSCCD GOAL 5:** RSCCD will use a cycle of integrated planning that will demonstrate the effective use of resources.
Chapters 4, 5, and 6 focus on RSCCD facilities. Chapters 4 and 5 describe the plans for each college, starting with summaries of the colleges’ educational master plans and the facilities master plans for the main campuses. These chapters continue with analyses of existing conditions and recommendations for future actions for RSCCD facilities that were not included in the colleges’ facilities master plans. The analysis of each facility examines the context, the physical character and condition, and the functional zoning and usage of that facility. These sections conclude with a summary of key findings and recommendations for the usage and management of each facility. Chapter 6 focuses on the RSCCD District Office and describes the analysis and recommendations for this facility.

Chapter 7 reports on RSCCD’s commitment to being a responsible steward of natural resources and the environment. RSCCD’s current initiatives are summarized, including efforts in the areas of sustainable facilities, transportation, recycling, communication, and engagement of students and the community. The recommendations describe a process to clarify priorities, set goals, create action plans, and monitor progress.
The Rancho Santiago Community College District 2013 Comprehensive Master Plan is a long-term plan that describes the district’s projections and goals for the coming decade. This plan includes the identification of current and anticipated challenges, statement of RSCCD Goals, summaries of the colleges’ educational and facilities master plans, and plans for off-site college and district facilities. Refer to the Rancho Santiago Community College District Planning Design Manual 2012 for greater detail on RSCCD’s planning processes.

The RSCCD 2013 Comprehensive Master Plan has been collaboratively developed to fulfill these purposes:

• Analyze selected current and projected district-wide demographic data to identify implications for planning;

• Develop RSCCD Goals that will serve as the basis for the RSCCD Strategic Plan and the colleges’ strategic plans;

• Provide a framework for the development of the facilities portion of this master plan;

• Inform the public of RSCCD intentions; and

• Support the RSCCD integrated planning model and demonstrate compliance with Title 5 and accreditation standards.
RSCCD faculty, staff, and administrators participated in the development of the RSCCD Comprehensive Master Plan in two ways. Refer to the acknowledgements page of this document for a list of participants.

PLANNING AND ORGANIZATIONAL EFFECTIVENESS COMMITTEE

As the participatory governance group responsible for district-level planning, the Planning and Organizational Effectiveness Committee is responsible for monitoring and overseeing the development and implementation of this core document.

The Planning and Organizational Effectiveness Committee includes the following members:

- Executive Vice Chancellor, Human Resources & Educational Services
- Assistant Vice Chancellor, Educational Services
- RSCCD Director of Research
- Vice President, Academic Affairs, Santa Ana College
- Vice President, Academic Affairs, Santiago Canyon College
- Institutional Effectiveness Coordinator, Santa Ana College
- Assistant Dean of Institutional Effectiveness and Assessment, Santiago Canyon College
- Two faculty members appointed by each Academic Senate, Santa Ana College and Santiago Canyon College
- Three Classified representatives appointed by CSEA (District Office, Santa Ana College and Santiago Canyon College)
The committee provided direction and input throughout the development of this document during monthly meetings in 2012 – 2013. Its tasks were to:

- Review the analysis of effectiveness comparing RSCCD’s current status to the RSCCD Mission Statement (internal scans) as well as projected demographic changes;
- Brainstorm challenges;
- Draft RSCCD Goals that describe how the District intends to address the identified current and anticipated challenges;
- Review the analysis of existing conditions for facilities;
- Brainstorm facilities recommendations; and
- Serve as first readers of each chapter.

In addition to these tasks, the members of the Planning and Organizational Effectiveness Committee also were the liaisons from this district-level planning effort to the two colleges and RSCCD Services.

DISTRICT-WIDE REVIEW OF DRAFTS

Drafts of this document were distributed district-wide for review and comment multiple times. All feedback was considered by the Planning and Organizational Effectiveness Committee and revisions were made as warranted.

Presentations to the Board of Trustees in February 4, 2013 and February 19, 2013, reviewed foundational data, current and anticipated challenges, draft RSCCD Goals, the analysis of facilities’ existing conditions, and facilities recommendations for District locations not included the colleges’ facilities master plans. The Board formally approved the RSCCD Goals in April 2013.

The RSCCD Goals established the context for facilities planning. Chapters 4, 5 and 6 document the investigation of and discussions about RSCCD facilities that took place in a combined meeting of the Planning and Organizational Effectiveness Committee and the Physical Resources Committee.
RSCCD Goal 1
RSCCD will assess the educational needs of the communities served by RSCCD and will adjust instructional programs, offerings, and support services and will allocate resources as needed to optimize the alignment of students’ needs with services and fiscal resources.

RSCCD Goal 2
RSCCD will assess the educational needs of the communities served by RSCCD and then pursue partnerships with educational institutions, public agencies, non-profit organizations, and business/industry/labor to collaboratively meet those needs.

RSCCD Goal 3
RSCCD will annually improve the rates of course completion and completion of requirements for transfer, degrees, certificates, and diplomas.

RSCCD Goal 4
RSCCD will support innovations and initiatives that result in quantifiable improvement in student access, preparedness, and success.

RSCCD Goal 5
RSCCD will use a cycle of integrated planning that will demonstrate the effective use of resources.
THE RANCHO SANTIAGO COMMUNITY COLLEGE DISTRICT (RSCCD)

• Description of RSCCD
• Santa Ana College
• Santiago Canyon College

NATIONAL, STATE, + LOCAL CONTEXT

• The Economy
• Community Colleges
DESCRIPTION OF THE DISTRICT

The Rancho Santiago Community College District (RSCCD) is part of the California Community College system — the largest system of higher education in the US, with 112 colleges organized into 72 districts that served a total of 2,424,094 students in 2011-2012.

This multi-college district is in Orange County, a relatively small urban county of 791 square miles in Southern California. Orange County is surrounded by the ocean to the west, Los Angeles County to the north, San Bernardino and Riverside Counties to the east, and San Diego County to the south. The total county population growth evidenced in the past 20 years is projected to continue, with Orange County’s 2011 population of 3,055,745 projected to reach 3,533,935 by 2020.

The RSCCD boundaries encompass 193 square miles, or 24% of Orange County. The portion of Orange County that includes RSCCD is densely populated. A little over one million residents live within RSCCD boundaries in the cities of Anaheim, Garden Grove, Orange, Santa Ana, and Tustin. The projection is for a 6% increase in the total population within RSCCD between 2010 and 2020. Chapter 2 of this document includes current demographics of the local population and economy and forecasts local population and economic changes.

RSCCD is surrounded by five other community college districts: Coast Community College District to the west, South Orange County Community College District to the south, Riverside Community College District to the east, Chaffey Community College District to the northeast, and North Orange County Community College District to the north. Given the proximity of these six districts, there is considerable free flow because students have many community college options within a reasonable driving distance.

Today RSCCD is one of the largest community college districts in California. RSCCD includes two colleges, one of the state’s oldest community colleges, Santa Ana College, and one of its newest, Santiago Canyon College. In fall 2012, RSCCD served 27,910 credit students and 16,222 non-credit students.
SANTA ANA COLLEGE

In 1915, Santa Ana College began as a department of Santa Ana High School with 26 students and 11 teaching faculty. It was the second junior college founded in Orange County and is the fourth oldest in all of California.

The earthquake of 1933 forced the college to relocate to a site on North Main Street, where it served 803 students with thirty-four teaching faculty. In 1947, it moved to a permanent campus at 17th and Bristol. The college continued to expand at this site and added sites across the community to increase student access. In 1971, Santa Ana College formally separated from the Santa Ana Unified School District. Shortly thereafter, the territory of the Orange Unified School District and portions of the Garden Grove Unified School District were added and the new organization was named the Rancho Santiago Community College District.

Santa Ana College has continued to grow; in fall 2012 the college served 29,318 students: 18,764 students taking credit courses and 10,554 students taking noncredit courses. Of the students taking credit courses, 1,998 of these students were enrolled in non-traditional classes such as Fire Academy, Contract Management, Criminal Justice Academy, Quality Assurance, Business Seminar, and Distance Education (online, television, and hybrid).

The college offers a full complement of general education, transfer-level, pre-collegiate level, and career and technical education classes leading to an associate degree or career/technical certificate. Students are supported in these instructional programs with a full range of support services. The college is ranked 25th among the top 100 colleges in the number of minority students earning associate degrees.

Santa Ana College's original 48-acre site was bounded by 17th Street to the north, Bristol Street to the east, Campus Road to the south, and College Avenue to the west. Although the core remains within this original area, the campus expanded beyond the original boundaries to now include 65 acres that provides 378,928 assignable square feet of space.
The college’s primary off-campus sites are:

- **Centennial Educational Center**: This facility on leased space offers almost 40,000 square feet of instructional space, which houses a full spectrum of continuing education courses for adult learners and a child development center. Enrollment in fall 2012 was 10,554 students with the largest portion enrolled in English as a Second Language courses. Other offerings include adult basic education, high school completion, parent, and vocational training.

- **Digital Media Center**: On approximately one acre, this facility of approximately 28,000 square feet houses classrooms, digital graphic design laboratories, and one of the largest television and video production studios in the community college system. This center includes a business incubator program dedicated to the emerging digital media industry in Orange County.

- **Orange County Sheriff’s Regional Training Academy**: This facility on 15 acres offers a little over 8,000 square feet of instructional space for lecture and applied practice courses for students enrolled in the Sheriff’s Training Academy programs as well as continuing education for law enforcement professionals.

- **Regional Fire Academy**: Although classroom instruction and departmental offices are housed at Santa Ana College’s main campus, the college also operates two off-campus fire technology training centers, the Joint Powers Training Center and the North Net Training Center. These sites provide the space and equipment needed to provide students with hands-on experiences that simulate real-world conditions. RSCCD owns the training facilities at both of these leased sites.

In addition to these locations, the college offers credit and non-credit courses at ninety other community locations including the Santa Ana Unified School District, hospitals, churches, and community centers.

In addition to courses offered face-to-face in these locations, the college also offers online courses. Fifty percent or more of the required courses for a variety of degree programs may be offered through distance education.
THE RANCHO SANTIAGO COMMUNITY COLLEGE DISTRICT (CONTINUED)

SANTIAGO CANYON COLLEGE

In 1980, RSCCD began the development of a center on 30 acres in East Orange, and in fall 1985, the Orange Campus began its first semester, offering a variety of general education, transfer and vocational education courses to more than 2,500 students. By 1996, enrollment at the Orange Campus had more than doubled.

In 1997, the Board voted unanimously to change the name of the Orange Campus to Santiago Canyon College. The college was independently accredited in 2000.

The college has continued to grow; in fall 2012 Santiago Canyon College served 14,814 students: 9,146 students taking credit courses and 5,668 students taking noncredit courses. Of the students taking credit courses, 1,044 students were enrolled in non-traditional classes such as Apprenticeship, Contract Management, Quality Assurance, Business Seminar, and Distance Education (online, television, and hybrid).

The college offers a full complement of general education, transfer-level, pre-collegiate level, and career and technical education classes leading to an associate degree or career/technical certificate. Students are supported in these instructional programs with a full range of support services. The college directs the state’s largest trades apprenticeship programs, providing trained workers in fields such as carpentry, cosmetology, electrician, maintenance mechanic, operating engineers, power lineman, and surveying.

Today, Santiago Canyon College has grown to 82 acres, occupying most of the land bounded by Jamboree Road, East Chapman Avenue, Newport Boulevard, and East Santiago Canyon Road. The building inventory has grown to 271,138 square feet and continues to grow with the recent completion of the Humanities Building, Gymnasium, Swimming Pool, and Maintenance and Operations facility.
The college’s off-campus site is the Orange Education Center. This facility consists of 92,000 square feet of instructional and administrative space, which houses a full spectrum of adult education and continuing education courses for adult learners as well as the district warehouse and publication center and a child development center. The majority of the 5,668 students who took advantage of this facility in fall 2012 were enrolled in either English as a Second Language (39%) or non-credit career technical education programs (29%). Other offerings include adult basic education, high school completion, and health/safety education.

In addition to courses offered face-to-face in these locations, the college also offers online courses. Fifty percent or more of the required courses for a variety of degree programs may be offered through distance education.
The nation is in a slow recovery from the most serious economic downturn since the 1930's. The impact is evident in every facet of the economy, including high unemployment rate and a sluggish housing market. Although unemployment rates are dropping and the housing market is on an upswing, the June 2013 UCLA Anderson Forecast warned that these improvements are not harbingers of true national recovery. Despite a recent increase in the nation’s gross domestic produce, the increase is not exceptional enough to reverse the sluggish trends. Although job numbers are improving very slowly, the types of new jobs are unlikely to ensure workers a secure future. Other economic indices that dampen optimism about economic recovery are that much of the government spending is funded with borrowing, the rate of national savings is unlikely to be sufficient to cover late-in-life health care issues, and too many workers lack the skills needed to compete in the modern economy. The pace of the economic recovery is illustrated in the slow rate of change in unemployment. The national unemployment rate was between 8.1% and 8.3% for all of 2012 until September, when the rate dropped to 7.8%. The national unemployment rate improved in the past eight months although very slowly, reaching 7.6% in May 2013. To provide a frame of reference, in December 2007, the national unemployment rate was 4.9%, and at the beginning of 2011, the national unemployment rate was 9.4%. A similar pattern of slow growth is seen in housing as evidenced by slight gains in new home construction and home prices along with record low mortgage interest rates.

Given the length of this recession, economists predict that many workers have become discouraged and have dropped out of the labor force. Such a decline in the number of adults participating in the workforce would distort the actual rate of unemployment; the actual unemployment rate is probably higher than the official estimates. As jobs are added, the unemployment rate may actually increase as discouraged workers once again seek employment. As evidence of this, the national unemployment rate was 7.5% in April and although employers added 175,000 jobs in May, the May national unemployment rate was 7.6% due to an increase in the number of workers seeking employment.
The unemployment rate is unevenly distributed, with a younger, unskilled population experiencing much higher rates of unemployment than older, better skilled and higher educated cohorts. [http://business.fullerton.edu](http://business.fullerton.edu)

The economic downturn in California has been especially severe. In December 2006, the state’s unemployment rate was 4.6%, and in January 2010, the rate had almost tripled, reaching 13.2%. Although the forecast was that California’s unemployment rate would remain close to 10% through 2014, with a full recovery of nonfarm jobs lost during the Great Recession to occur in the second quarter of 2016, the economy may be recovering at a faster pace than anticipated. California’s unemployment rate dropped to 8.6% in May 2013, which is the first time this state’s unemployment rate has been below 9% in five years. [http://www.bls.gov](http://www.bls.gov). Even with this good news, California’s economy is recovering more slowly than other states; California’s rate is higher than the unemployment rate in 44 other states.

Other economic indices also show a slow but steady economic recovery for both California and Orange County. Job growth is projected to trend upward throughout 2013, and the trend for higher housing affordability that began in 2012 is projected to continue through 2013.

Due to the concentration of financial services located in Orange County, the county entered the recession earlier than other California counties. Layoffs in the financial service spread to the related local construction and development industries, eventually trickling into all sectors of the Orange County economy. During this recession the county’s unemployment rate was close to 10% in mid-2009, but since then, it has declined at a faster rate than the statewide unemployment rates. In May 2013, the unemployment rate for Orange County was 5.5%, which is significantly below the statewide unemployment rate of 8.6% for the same month which is significantly below the statewide unemployment rate of 8.6% for the same month. [http://www.ocbj.com](http://www.ocbj.com)

One economic forecast for Orange County projects continued increases in employment and concomitant increases in household income and home prices throughout 2013 and 2014. [http://chapman.edu/economic-forecast/](http://chapman.edu/economic-forecast/)

Occupational sectors in Orange County that have shown positive job growth despite the recession are educational and health services; accounting, tax preparation and book-keeping services; management; scientific and technical consulting; legal services; computer systems design and related services; and specific subsectors of leisure and hospitality. The sectors in Orange County most impacted by this recession are construction, information, financial activities, manufacturing, retail trade, professional and business services, and government.

Due to the declines in every sector of the economy, state lawmakers have been coping with deficits in the billions of dollars each year. All state-supported public services and programs have suffered significant reductions in state allocations, which includes California community colleges.
COMMUNITY COLLEGES

Based on the belief that college-educated residents are necessary in order to advance its economic, political, and social success, California developed an impressive system of 112 community colleges. The colleges are as diverse as the regions and populations they serve. The largest higher education system in the world, California community colleges served a total of 2,606,356 students by headcount with 1,235,078 full-time equivalent students taking credit courses and 78,787 full-time equivalent students taking non-credit courses in 2010–2011. To place these numbers in perspective, 24% of all community college students in the nation are enrolled at a California community college. (www.ccleague.org)

California community colleges are the most cost-effective system of education in the state when compared to K-12 public schools and the University of California and CSU systems. In 2010–2011, the state revenue allocated for a full-time community college student was $5,400 compared to $7,708 a year for a full-time student in the K-12 system and $11,500 and $21,500, respectively, at a California State University and a University of California.

The Great Recession has had a significant impact on California community colleges. Today these community colleges are called upon to continue providing quality higher education while also addressing five powerful and inter-related challenges.

1. **Increase in Student Demand**
   Two of the ripple effects of the Great Recession have increased student demand for access to community college programs and services. First, given California’s high unemployment rate, students are seeking entry into community colleges for career training. Second, since the state’s budget deficits have impacted all three of the state’s public higher education systems, the state’s universities have reduced the number of students in their freshman classes. As a result, there is an increase in the numbers of students seeking entry into community colleges to fulfill transfer requirements.
2. **Emphasis on Degree and Certificate**

   Emphasis on Degree and Certificate Completion. Once the industrialized country with the highest percentage of young adults with a college degree globally, America now ranks 10th. College-age students are now likely to be less well educated than their parents. President Barack Obama recently announced an American Graduation Initiative that challenges the nation to award an additional five million degree and certificate by 2020. Extrapolating that challenge to community colleges, each California community college needs to triple the number of degrees and certificates awarded by 2020. ([http://www.cccvision2020.org](http://www.cccvision2020.org))

   Despite ready access to community colleges, California ranks lower than many other states on the higher education achievements of its residents. About 54 percent of community college students earn a certificate, a degree or transfer to a four-year institution. That number drops further for students who are African-American or Latino.

   Based on the U.S. Census, 38.6% of the working adults in California aged 25 to 64 have earned an associate degree or higher. According to the Georgetown University Center on Education and the Workforce, 61% of California’s jobs will require postsecondary education as soon as 2018. The current rate of degree completion will be insufficient to meet this workforce needs. Analysts at the Lumina Foundation project that if the current rate of degree completion continues, 44.7% of California’s working adults will have earned a college degree by 2025, far short of the 60% that is projected. ([http://www.luminafoundation.org](http://www.luminafoundation.org))

3. **California Achievement Gap**

   A recent study by the Institute for Higher Education Leadership and Policy at California State University in Sacramento identified ethnic differences in student achievement. Among the African-American and Latino students who attend community colleges, proportionately fewer African-American and Latino students (26% and 22% respectively) completed a degree or certificate within six years compared to white and Asian Pacific Islanders (37% and 35% respectively). Proportionately, twice as many white students transfer to a four-year university than Latino students. ([http://www.csus.edu/ihelp/PDFs/R_Div_We_Fail_1010.pdf](http://www.csus.edu/ihelp/PDFs/R_Div_We_Fail_1010.pdf))
Fiscal Challenge

State allocations to the colleges declined by $809 million, or 12%, between 2008-09 and 2012-2013. To adjust to this decline in state apportionment, California community colleges reduced programs and services. The number of credit course sections decreased 24% and the number of non-credit course sections decreased 38% statewide, resulting in a decrease in enrollment of more than 485,000 students over these years. (http://californiacommunitycolleges.cccco.edu)

In November 2012, the voters approved Proposition 30, a temporary tax increase dedicated to restoring funding for education. Community college received $210 million in additional funds in 2012–2013, which provided the community colleges with the funding to restore some sections in spring 2013. Given the conditions of this proposition, annual increases in state apportionment are projected to continue through 2016–2017. Therefore, restoration in the level of state funding for community colleges continued in the 2013–2014 budget with $197.7 million allocated for an increase in apportionment and $179 million allocated to pay funds that were previous promised but not paid.

4. Adult Education Challenge

About 1.5 million residents in California aged 18 and older take advantage of adult education programs offered by adult schools associated with K-12 districts and community colleges. In 2009–2010, the majority of these students (66%) attended the adult education programs at community colleges. A December 2012 report from the Legislative Analyst’s Office identify a number of problems with the current status of California’s adult education programs and call for a restructuring of these programs. http://www.lao.ca.gov/reports/2012/edu/adulteducation/restructuring-adulteducation-120412.pdf

The state’s 2013-2014 budget supports the role of community colleges as providers of adult education in that $315.7 million for adult education was shifted from K-12 to California community colleges.

The state’s priorities related to adult education will drive educational and facilities planning for non-credit programs during the next decade. Since RSCCD offers one of the largest adult education programs in the state, planning for this program will be contingent on statewide decisions.
Three statewide solutions to these challenges developed in 2012 are as follows.

- To direct the energies of the California community college system toward solutions to these issues, the Community College League of California asked 33 college leaders to develop system-wide recommendations based on an analysis of 24 influential reports on student success. These reports explored various influences on student success: the impact of fiscal and academic policies, best practices, and state and local accountability. Based on their analysis, the Commission prepared the Report on the Commission on the Future that offers 17 recommendations of strategies to address the challenges facing California’s community colleges. [http://www.cccvision2020.org](http://www.cccvision2020.org)

- A Student Success Task Force of statewide leaders studied best practices and proposed initiatives that promise to improve students’ successful completion of degrees and certificates. Several of these initiatives are being implemented. Through legislation (SB1456), colleges would be required to: (i) provide intensive orientation to help new students establish their educational goals, (ii) administer a common assessment to students upon entry into a community college, (iii) monitor completion of academic goals in order for students to qualify for a Board of Governors’ fee waiver, and (iv) post a student success “scorecard” with statistics such as certification, degree and transfer rates broken down by gender and ethnicity. In addition to this legislation, the Board of Governors approved a change in priority registration to be implemented in fall 2014: new students who have completed college orientation, completed college assessment, and developed education plans as well as continuing students in good academic standing who have not exceeded 100 units (not including units in basic English, math or English as a Second Language) will have priority over students who do not meet these criteria.

- An important strategy to improve California’s degree completion rates has been codified in the Student Transfer Achievement Reform Act (SB 1440). Research shows that California community college students annually transfer to a state university with more than the required 60 semester units. Under the provision of this recent legislation, eligible students will receive an associate degree for transfer in their area of study with 60 units. Following this step, they are then guaranteed admission into a CSU campus as a junior and only need to complete 60 additional units in order to graduate with a bachelor’s degree.

In addition to coping with these changes, at local levels many community colleges are re-examining their missions to align their programs and services with the needs of the communities they serve, in a fiscally responsible manner.
RSCCD Goal 1
RSCCD will assess the educational needs of the communities served by RSCCD and will adjust instructional programs, offerings, and support services and will allocate resources as needed to optimize the alignment of students’ needs with services and fiscal resources.

RSCCD Goal 2
RSCCD will assess the educational needs of the communities served by RSCCD and then pursue partnerships with educational institutions, public agencies, non-profit organizations, and business/industry/labor to collaboratively meet those needs.

RSCCD Goal 3
RSCCD will annually improve the rates of course completion and completion of requirements for transfer, degrees, certificates, and diplomas.

RSCCD Goal 4
RSCCD will support innovations and initiatives that result in quantifiable improvement in student access, preparedness, and success.

RSCCD Goal 5
RSCCD will use a cycle of integrated planning that will demonstrate the effective use of resources.

IMPLICATIONS FOR PLANNING
OVERVIEW

This chapter provides background information about the demographic and economic characteristics of the Rancho Santiago Community College District (RSCCD) service area and its students. This information is presented in these five sections:

1. Regional Population Trends and Characteristics:
   Current and projected demographic characteristics, such as age, race/ethnicity, and educational levels, and income for the population within the RSCCD geographic boundaries;

2. Local Economic Trends:
   Current and projected employment patterns by occupational category;

3. Santa Ana College Data:
   Current demographic characteristics for credit and noncredit students, such as age, race/ethnicity, educational goals, and academic success, and measures of student achievement;

4. Santiago Canyon College Data:
   Current demographic characteristics for credit and noncredit students, such as age, race/ethnicity, educational goals, and academic success, and measures of student achievement;

5. Implications for Planning:
   A summary of the key elements most relevant to planning.

The data in this report are based on an analysis of the six cities within the RSCCD boundaries: Anaheim, Garden Grove, Orange, Santa Ana, Tustin and Villa Park. Although the RSCCD boundaries do not include the entirety of cities such as Anaheim and Garden Grove, the population trends in these cities are relevant for planning in RSCCD. Therefore, data for each entire city are included rather than including only the specific zip codes within RSCCD boundaries. Data for Orange County and the state provide points of comparison as appropriate.

The data profiles for the two colleges, Santa Ana College and Santiago Canyon College, include current data as well as comparisons across multiple years where available. All data about RSCCD are provided by the RSCCD Research Department; data sources other than the RSCCD Research Department are cited.

- The number of residents living within the RSCCD geographic boundaries is projected to increase 6% by 2020.
- A population increase is projected for all cities within RSCCD boundaries, with Anaheim and Tustin projected to have the greatest increase (10% and 8% respectively). Orange, Santa Ana, and Villa Park are projected to increase at a rate lower than the other communities (4%).
- The distribution of the population across the six cities in RSCCD is projected to remain stable over the next decade.

- The three most common race/ethnicity cohorts in Orange County in 2010 are White (44%), Hispanic (34%), and Asian (18%). The projections for 2020 are that the majority of the county’s population will be made up of the same race/ethnicity cohorts in the same order, although the proportions will shift, with White residents comprising the highest at 39%, followed by Hispanic at 35% and Asian at 22%.

- Over the next decade, the greatest shifts in the race/ethnicity composition of Orange County population will be an increase in residents who self-identify as Asian, Hispanic, and “Other” at 34%, 12%, and 10% respectively and a decrease in White residents from 44% to 39%.

Source: Center for Demographic Research, 2012

- Overall, in fall 2010, the race/ethnicity of the RSCCD credit student population approximated the total population who live within RSCCD boundaries. The slight differences are: a higher proportion of both Asian and Hispanic residents in the community compared to the student population (Asian: 17% versus 13%; Hispanic: 55% versus 54%) and a slightly lower proportion of both White and “Other” residents in the community compared to the student population (White: 24% versus 27%; Other: 2% versus 4%).

Source: American Community Survey (5-year), report S0101 (Age and Gender), Census 2010

Note: (1) The age cohorts are unevenly divided to provide a projection for college-going ages. (2) There is a slight discrepancy in the total Orange County population compared to previous data sets due because these data were extracted from a different source.

- For those who live within RSCCD boundaries, the proportion of residents in each age cohort is approximately the same proportion as in the county and the state demographics.
- The proportion of residents in each age cohort is similar for five of the communities in RSCCD boundaries. About a quarter of the population is younger than 14 years old; the 15 to 19 age cohort represents the lowest proportion of the population; and the remainder of the population is distributed almost evenly across the other age cohorts. In Villa Park the highest proportion of residents is age 60 or older and the lowest proportion is between the ages of 30 to 39.

Source: American Factfinder (American Community Survey 5-year DP02 Report), 2010 Census

- About half of the residents who are age five and older speak only English at home in four of the seven communities in RSCCD. This proportion declines to 40% in Anaheim, 34% in Garden Grove, and 17% in Santa Ana.

- For residents age five and older who speak a language other than only English at home, Spanish is the most common language in four of the six communities within RSCCD boundaries. In the remaining two communities, Asian and Pacific Islander languages are more common than Spanish and English only.

- Four of the six communities within RSCCD boundaries have a lower proportion of residents who speak only English at home compared to the county and the state proportions. These four communities make up 87% of the total population within RSCCD boundaries. (see Data Set 1.)
Data Set 10. Median and Mean Household Income by Cities within RSCCD Boundaries, 2010

Source: American Factfinder (American Community Survey 5-year DP03 Report), 2010 Census

- The median household income for Orange County is significantly higher than the median household income for the state.
- In 2010, Anaheim and Santa Ana had a median household income below the median household income in both Orange County and the state. The median household income in Garden Grove is comparable to the state median household income but is below the county. The median household income in Orange, Tustin, and Villa Park are comparable to or higher than both the county or state median household income.

Source: American Factfinder (American Community Survey 5-year DP02 Report), 2010 census

- The proportion of adults who have not attended college at all is significantly higher in Anaheim, Garden Grove, and Santa Ana compared to the state and the county proportions (48%, 51%, and 69% respectively). The proportion of adults who have not attended college at all is 34% for Orange County and 41% for the state.

- Similar to the state and county proportions, the proportion of adults who have some college but have not completed a degree is slightly over 20% for Anaheim, Garden Grove, Orange, Tustin, and Villa Park. The rates of degree completion in Tustin and Villa Park (46% and 57% respectively) are the highest in RSCCD boundaries and exceed both county and state rates (45% and 38% respectively).

<tr>
<td>Average enrollment per student for all non-credit</td>
<td>3.1</td>
<td>2.9</td>
<td>2.9</td>
<td>3.0</td>
<td>2.3</td>
</tr>
</tbody>
</table>

**Notes:**
1. Students in the “on-campus credit” category are included in the “all credit” category.
2. The category of “on-campus credit” excludes the following non-traditional classes: Fire Academy, Contract Management, Criminal Justice Academy, Quality Assurance, Business Seminar, and Distance Education (online, television, and hybrid).
3. In the calculation of headcount each student is counted once. In calculation of enrollment students are counted for each section in which they enroll.

- Student headcount and enrollments in credit and non-credit courses at Santa Ana College declined each of the three fall semesters from 2009–2011 due to state-imposed reductions in the number of students funded, which resulted in fewer sections being offered compared to previous years.
- Student headcount and enrollments in all types of credit courses was higher in fall 2012 compared to the prior two years. There has been a consistent decrease in non-credit student headcount and enrollments due to a parallel decrease in the number of non-credit offerings.
- For both categories of credit courses, the average number of enrollments per student has increased significantly in the past five years from 2.6 to 3.5.
Data Set 18. Santa Ana College Credit Full-time Equivalent Students, 2007–2012

- The proportion of students in traditional college-going ages (ages 18 – 25) has increased each year from 2008 to 2012. There has been a corresponding steady decrease in the proportion of students in each age cohort older than 30 years of age.
- Seventy-eight percent of the Santa Ana College student population is younger than 30 years old.

*Note: These data reflect students’ initial interests at the time of applying to Santa Ana College and do not reflect students’ later educational goals following college experiences, such as attending orientation, meeting with a counselor, or completing courses.*

- The proportion of students seeking an associate degree or transfer without a degree has increased each year from 40% in 2008 to 64% in 2012.
- The proportion of students seeking vocational certificates or taking courses for employment has decreased each year from 28% in 2008 to 14% in 2012.

</tbody>
</table>

- At entry into Santa Ana College, the majority of the students taking the English and mathematics placement test score below transfer level.
- The proportion of the students scoring below transfer level on both English and mathematics placement tests decreased slightly in fall 2012.

### Data Set 26. Santa Ana College Credit Course Completion and Retention Rates, 2007–2011

<table>
<thead>
<tr>
<th></th>
<th>Fall 2007</th>
<th>Fall 2008</th>
<th>Fall 2009</th>

</tr>
<tr>
<td>Course Retention</td>
<td>81%</td>
<td>82%</td>
<td>83%</td>
<td>85%</td>
<td>84%</td>
<td>80%</td>
</tr>
</tbody>
</table>

**Notes:** (1) Successful course completion compares the number of students enrolled at census with the number of students who earned a final grade of A, B, C, or Pass. (2) Course retention compares the number of students enrolled at census with the number of students who earned any final grade. This calculation excludes students who withdrew from the course after census.

- The proportion of students earning a passing final grade in credit courses has been relatively consistent over the past five years, with the current rate of 71% being higher than the statewide successful course completion rate of 66%.
- The retention rate steadily increased from fall 2007 to fall 2010, rising from 81% to 85%. The fall 2011 rate of 84% is higher than the statewide average of 80%.
### Data Set 27. Santa Ana College Distance Education Credit Course Completion and Retention Rates, 2007–2011

<table>
<thead>
<tr>
<th></th>
<th>Fall 2007</th>
<th>Fall 2008</th>
<th>Fall 2009</th>
<th>Fall 2010</th>
<th>Fall 2011</th>
<th>Statewide Average Fall 2011</th>
</tr>
</thead>
<tbody>
<tr>
<td>Successful Course Completion</td>
<td>47%</td>
<td>50%</td>
<td>57%</td>
<td>58%</td>
<td>58%</td>
<td>58%</td>
</tr>
<tr>
<td>Course Retention</td>
<td>65%</td>
<td>66%</td>
<td>71%</td>
<td>76%</td>
<td>73%</td>
<td>78%</td>
</tr>
</tbody>
</table>

Notes: (1) This snapshot of distance education courses excludes television and hybrid courses. (2) Successful course completion compares the number of students enrolled at census with the number of students who earned a final grade of A, B, C, or Pass. (3) Course retention compares the number of students enrolled at census with the number of students who earned any final grade. This calculation excludes students who withdrew from the course after census.

- The successful course completion rate for distance education courses at Santa Ana College steadily increased between fall 2007 and fall 2011, and that rate now matches the statewide average.
- The course retention rate for distance education courses at Santa Ana College has increased, reaching the highest level (76%) in Fall 2010. The course retention rate is lower than the statewide average in fall 2011.
- For distance education courses in this five-year snapshot, the successful course completion rate and the course retention rates are significantly below the same measures for on-campus courses (58% versus 71% and 73% versus 84% respectively for fall 2011).
2.30 Student Success Scorecard: The Board of Governors convened a Student Success Task Force in January 2011 for the purpose of identifying benchmarks associated with students’ successful completion of degrees and certificates. The Task Force’s analysis of research on factors that contribute to student success pointed to the conclusion that each time a student progresses beyond one of these benchmarks, the likelihood of students’ completing degrees or certificates increases. To focus attention on these critical progression metrics, in January 2012 the Task Force recommended that the Board of Governors establish a performance measurement system that tracks student success at all 112 community colleges on standardized progression metrics. This recommendation was approved. The Student Success Scorecard was published for the first time in spring 2013 (scorecard@cccco.edu). The following five data sets present this information for Santa Ana College.

Data Set 28. Santa Ana College Student Achievement

</tr>
<tr>
<td>• Remedial students</td>
<td>66%</td>
<td>63%</td>
<td>63%</td>
<td>65%</td>
<td>66%</td>
</tr>
</tbody>
</table>

Notes: (1) **Completion Rate** is the percentage of degree and/or transfer seeking students who completed a degree, certificate or transfer-related outcomes. (2) **Percent of Students Who Earned at Least 30 Units** is the percentage of degree and/or transfer seeking students who achieved at least 30 units. (3) **Remedial students** are those enrolled in courses below transfer level.

- Combining the achievements of prepared and remedial students on the Completion Rate, the overall rate is relatively stable at slightly below 50% in this five-year period. Consistently over this period, the rates for prepared students are almost twice as high as the rates for remedial students.
- The percentage of students who earned at least 30 units increased slightly over the past five years reaching 70% in the most recent analysis. This percentage has increased significantly for prepared students reaching 80% in the most recent analysis. The percentages of remedial students who have earned at least 30 units have remained relatively stable at 66% or slightly below.
### Data Set 29. Santa Ana College Student Persistence Rate

<table>
<thead>
<tr>

</tr>
<tr>
<td>• Remedial students</td>
<td>75%</td>
<td>74%</td>
<td>75%</td>
<td>74%</td>
<td>72%</td>
</tr>
</tbody>
</table>

*Note: Persistence rate is the percentage of degree and/or transfer-seeking students tracked for six years through 2011–2 who enrolled in the first three consecutive terms.*

- The persistence rate for Santa Ana College students enrolled in both transfer-level and below transfer level courses has been consistent in the last two measurement cycles between 72% – 76%. The persistence rate for students enrolled in transfer-level courses has been slightly higher than for students enrolled in courses below transfer level.

### Data Set 30. Santa Ana College Basic Skills Education Progress

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• Basic Skills English</td>

<td>-</td>
</tr>
<tr>
<td>• Basic Skills ESL</td>
<td>10%</td>
<td>8%</td>
<td>7%</td>
<td>6%</td>
<td>7%</td>
</tr>
</tbody>
</table>

*Notes: (1) Basic Skills Education Progress is the percentage of credit students who started below transfer level in English, mathematics, and/or ESL and completed a college-level course in the same discipline within the subsequent six years. (2) The ESL basic skills progress rate in this data set presents the information on the Student Success Scorecard. However, due to a misalignment in coding basic skills courses, these data are not correct. In 2012 the college revised the coding for ESL basic skills courses to align with state guidelines. Given that this measure tracks student through six years of coursework, this state-generated report will truly reflect Santa Ana College's operations and student performance for the first time in the 2018 report.*

- The rate for students who attempt a basic skills course in English and who later successfully complete a college-level English course is below 30%. The rate has fluctuated over the years of this analysis with the most recent analysis yielding a rate of 26%.

- Similarly, the rate for students who attempt a basic skills course in English as a Second Language and who later successfully complete a college-level course in the same discipline has fluctuated over the years of this analysis from 28% to 42% with the most recent analysis yielding the highest rate.
### Data Set 31. Santa Ana College Career Technical Education Rate

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Career Technical Education Rate</td>
<td>48%</td>
<td>53%</td>
<td>56%</td>
<td>50%</td>
<td>50%</td>
</tr>
</tbody>
</table>

Note: The Career Technical Education Rate is the percentage of students who completed several career technical education courses in a single discipline and completed a degree, certificate, or transferred.

- The rate for students who complete several career technical courses in a single discipline before transferring or earning a degree or certificate is 50% in the most recent analysis. This rate has fluctuated between 48% and 56% over the past decade.
Data Set 32. Santa Ana College Degrees and Certificates Awarded by Race/Ethnicity, 2008–2012

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

- The number of associate degrees awarded by Santa Ana College was highest in 2011–2012, reaching a high of 1,503 degrees awarded in 2011–2012.
- Similarly, the number of certificates awarded by Santa Ana College doubled between 2008–2009 and 2009–2010. The pattern over the past five years is one of steady increases, reaching a high of 1,298 certificates awarded in 2011–2012.
- The proportion of associate degrees awarded to students in various race/ethnic categories has remained consistent over the past five years within these ranges:
  - African-American: 1% to 3%
  - Asian: 19% to 24%
  - White: 17% to 20%
  - Hispanic: 49% to 54%
  - Other: 5% to 8%
- The proportion of certificates awarded to students who identify themselves as African-American, Asian, and “Other” have been relatively consistent over the past five years. However, the proportion of certificates awarded to students who identify themselves as White has declined, from a high of 33% in 2007–2008 to 15% in 2011–2012. During the same years, the proportion of certificates awarded to students who identify themselves as Hispanics has increased from a high of 40% in 2007–2008 to 58% in 2011–2012.
Data Set 33. Santa Ana College Transfers to Universities, 2006–2007 to 2011–2012

<table>
<thead>

<td>2,229</td>
</tr>
</tbody>
</table>

Note: The number of students who transfer in any year is contingent on both student readiness to transfer and the capacity of the universities to accept transfers.

- The number of students who transfer to CSU and private universities has increased dramatically over the past six years while the numbers of students who transfer to UC has remained relatively consistent.

Source: Chancellor’s Office, Datamart
Note: The Transfer Velocity Project tracked first-time college students who demonstrate that they intend to transfer by the courses they choose from their first academic year of enrollment to the point of transfer to a four-year institution. To be included in this transfer cohort, students must complete at least 12 units, including a transfer-level English or mathematics course within a 6-year period. The transfer rate was then based on the total number of students who transferred compared to the number of students in the cohort. The Research & Planning Group conducted the study between 2007 and 2009. More information on the Transfer Velocity Project is available at: [http://webprod.cccco.edu/datamarttrans/dmtrnsstucsel.aspx](http://webprod.cccco.edu/datamarttrans/dmtrnsstucsel.aspx)

- Based on data in the Transfer Velocity Project, the proportion of students in each cohort who transferred to a university from Santa Ana College remained in the 21% to 24% range, which was consistent but slightly below the statewide average in the same study.
Santa Ana College’s School of Continuing Education offers non-credit classes in various off-campus sites as well as at the Centennial Educational Center. The non-credit offerings include a full spectrum continuing education courses for adult learners. These offerings include adult basic education, high school completion, parent education and vocational training, with the largest enrollment in English as a Second Language.

• The number of students attending the School of Continuing Education has declined each year for the past five years, parallel to the reductions in non-credit offerings.
• Since a significant proportion of the students did not provide race/ethnicity data in each of these years, conclusions must be tentative. Of the students who provided race/ethnicity data, the students attending the School of Continuing Education are predominantly Hispanic (86% to 88%).
• The proportion of students in each race/ethnic category has remained approximately the same over the past five years.

</tbody>
</table>

Note: In Fall 2009, the district transitioned to a new enterprise system and is unable to collect this data for that semester.

- Since 30% to 40% of the students did not provide citizenship information in each of these years, conclusions must be tentative. The majority of the students attending the School of Continuing Education who provided citizenship information are not United States citizens.

Data Set 39. Santa Ana College School of Continuing Education Offerings and FTES, 2009–2012

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of Offerings</td>
<td>2,304</td>
<td>1,749</td>
<td>1,721</td>
</tr>
<tr>
<td>FTES</td>
<td>5,909</td>
<td>5,612</td>
<td>4,922</td>
</tr>
</tbody>
</table>

- In recent years, the state reduced the number of students funded. As a result, there has been a decrease in the number of non-credit offerings and full-time equivalent students (FTES).
Data Set 40. Santa Ana College School of Continuing Education Completion Rates and CASAS Learning Gains, 2009–2012

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>CASAS Learning Gains</td>
<td>17,393</td>
<td>15,201</td>
<td>15,280</td>
</tr>
</tbody>
</table>

Notes: (1) Prior to 2010–2011, only two programs reported grades. Since then, a policy change required all departments to issue and report final grades to better track students’ successful completion of offerings required for certificates of completion. (2) The acronym CASAS is for Comprehensive Adult Student Assessment System which is an assessment tool used in California to measure gains in student learning as measured a gain of three to five points comparing a pre-test and post test. A learning gain is also captured when a student earns a high school diploma, GED, or U.S. Citizenship. In addition, there are other assessments in which a learning gain can be captured through the English Language (EL) Civics program. Through EL Civics, students demonstrate that they have achieved competence in performing a civic task, such as writing to a legislator, participating in a city council meeting, visiting the post office or library, etc.

- The number of successful completions of non-credit offerings has increased despite the slight reduction in the number of offerings.

Data Set 41. Santa Ana College School of Continuing Education Awards, 2009 – 2012

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>High School Diploma</td>
<td>150</td>
<td>168</td>
<td>144</td>

<td>450</td>
<td>434</td>
<td>2,306</td>
</tr>
<tr>
<td>General Education Development (GED)</td>
<td>39</td>
<td>35</td>
<td>20</td>
</tr>
</tbody>
</table>

Note: California transitioned to a standardized grading system in 2011–2012. This change resulted in the identification of a greater number of course/program completions.

- Awards of high school diplomas and general education development certificates have declined slightly over this three-year snapshot.
- Awards of program completion certificates have increased dramatically.
**Data Set 42. Santa Ana College Satisfaction Ratings by Credit Students**

<table>
<thead>
<tr>
<th></th>
<th>Percent of “Good” and “Excellent” Ratings</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2010</td>
</tr>
<tr>
<td>N=740</td>

</tr>
<tr>
<td>My ability to register for classes I want or need</td>
<td>80%</td>
</tr>
<tr>
<td>Variety of classes offered</td>
<td>68%</td>
</tr>
</tbody>
</table>

- On surveys in the past three years, most of the students taking credit courses at Santa Ana College (80% to 89%) have consistently reported satisfaction with their overall experience at the college, the campus environment, and the effectiveness of the classroom learning experience.
- Ratings of the availability and variety of classes have been consistent over the past three years with 60% to 69% of the students reporting satisfaction.
- Student satisfaction with class size has fluctuated, with the lowest rating in 2012 when 57% of the students reporting that class sizes were “good” or “excellent.”
- Ratings on campus safety and security decreased, and ratings of the appearance and maintenance of the grounds and facilities increased.
### Data Set 43. Santa Ana College Satisfaction Ratings by Non-Credit Students, 2012

<table>
<thead>
<tr>
<th>Aspect</th>
<th>Percent of “Good” and “Excellent” Ratings</th>
</tr>
</thead>
<tbody>
<tr>

<td>Average enrollments per students for all non-credit</td>
<td>3.2</td>
<td>2.2</td>
<td>2.3</td>
<td>1.9</td>
<td>2.4</td>
</tr>
</tbody>
</table>

- In this five-year snapshot, student headcount in credit courses at Santiago Canyon College reached a low of 8,861 students in fall 2010 due to state-imposed reductions in the number of students funded, which resulted in fewer sections being offered compared to previous years. Although there was some recovery of the total student headcount in the past two years, the total headcount has not yet equaled the fall 2008 level.
- The number of student enrollments has remained relatively stable around 3.0 enrollments per student. The highest average number of enrollments per student was 3.1 in fall 2011.
- There has been a similar recent decrease in non-credit offerings and enrollment that created the trend of a decline in student headcount.
Data Set 46. Santiago Canyon College Credit Full-time Equivalent Students, 2007–2012

- In recent years, there has been a shift in the proportions of the students who identify themselves as White and Hispanic. The proportion of students who identify themselves as White has decreased steadily over the past five years, from 45% in fall 2008 to 39% in fall 2012 while the proportion of students who identify themselves as Hispanic has increased, from 33% in fall 2008 to 41% in fall 2012.

- The proportion of Santiago Canyon College’s student population in all other race/ethnicity categories has remained approximately the same, except for a decrease in the proportion of students who placed themselves in the “other” category.

<td>82%</td>
<td>81%</td>
<td>82%</td>
<td>84%</td>
<td>80%</td>
</tr>
</tbody>
</table>

Notes: (1) Successful course completion compares the number of students enrolled at census with the number of students who earned a final grade of A, B, C, or Pass. (2) Course retention compares the number of students enrolled at census with the number of students who earned any final grade. This calculation excludes students who withdrew from the course after census.

- The proportion of students earning a passing final grade in credit courses has fluctuated in recent years at Santiago Canyon College, reaching a high of 70% in fall 2011, which is higher than the statewide successful course completion rate of 66%.
- The retention rate increased from fall 2007 to fall 2011, rising from 82% to 84% which is higher than the statewide average of 80%.
Data Set 55. Santiago Canyon College Distance Education Credit Course Completion and Retention Rates 2007–2011

<table>
<thead>
<tr>
<th></th>
<th>Fall 2007</th>

<tr>
<td>Course Retention</td>
<td>70%</td>
<td>73%</td>
<td>71%</td>
<td>69%</td>
<td>83%</td>
<td>78%</td>
</tr>
</tbody>
</table>

Notes: (1) This snapshot of distance education courses excludes television and hybrid courses. (2) Successful course completion compares the number of students enrolled at census with the number of students who earned a final grade of A, B, C, or Pass. (3) Course retention compares the number of students enrolled at census with the number of students who earned any final grade. This calculation excludes students who withdrew from the course after census.

- The successful course completion rate for distance education courses at Santiago Canyon College has fluctuated during this five-year snapshot, reaching 55% in fall 2011. Although 55% is higher than three of the four preceding years, this rate of successful course completion for fall 2011 is below the statewide average of 58%.
- The course retention rate for distance education courses at Santiago Canyon College has fluctuated from a low of 69% in fall 2010 to 83% in fall 2011. The fall 2011 course retention rate for distance education courses is higher than the fall 2011 statewide average of 78%.
**Student Success Scorecard:** The Board of Governors convened a Student Success Task Force in January 2011 for the purpose of identifying benchmarks associated with students’ successful completion of degrees and certificates. The Task Force’s analysis of research on factors that contribute to student success pointed to the conclusion that each time a student progresses beyond one of these benchmarks, the likelihood of students’ completing degrees or certificates increases. To focus attention on these critical progression metrics, in January 2012 the Task Force recommended that the Board of Governors establish a performance measurement system that tracks student success at all 112 community colleges on standardized progression metrics. This recommendation was approved. The Student Success Scorecard was published for the first time in spring 2013 (scorecard@cccco.edu). The following five data sets present this information for Santiago Canyon College.

**Data Set 56. Santiago Canyon College Student Achievement**

</tr>
<tr>
<td>• Remedial students</td>
<td>65%</td>
<td>68%</td>
<td>68%</td>
<td>69%</td>
<td>67%</td>
</tr>
</tbody>
</table>

Notes: (1) **Completion Rate** is the percentage of degree and/or transfer seeking students who completed a degree, certificate or transfer-related outcomes. (2) **Percent of Students Who Earned at Least 30 Units** is the percentage of degree and/or transfer seeking students who achieved at least 30 units. (3) **Remedial students** are those enrolled in courses below transfer level.

- Combining the achievements of prepared and remedial students on the Completion Rate, the overall rate is relatively stable in a range of 57% to 59% in this five-year period. Consistently over this period, the rates for prepared students are almost twice as high as the rates for remedial students.

- The percentage of students who earned at least 30 units increased slightly over the past five years reaching 71% in the most recent analysis. This percentage has increased for prepared students reaching 77% in the most recent analysis. The percentages of remedial students who have earned at least 30 units have remained relatively stable in the 65% to 69% range.
Data Set 57. Santiago Canyon College Student Persistence Rate

<table>
<thead>
<tr>

</tr>
<tr>
<td>• Remedial students</td>
<td>72%</td>
<td>78%</td>
<td>74%</td>
<td>76%</td>
<td>75%</td>
</tr>
</tbody>
</table>

Note: Persistence rate is the percentage of degree and/or transfer-seeking students tracked for six years through 2011–12 who enrolled in the first three consecutive terms.

- The persistence rate for Santiago Canyon College students is lower in the most recent year compared to the preceding four years. Remedial students show a higher persistence rate than prepared students taking transfer-level courses.

Data Set 58. Santiago Canyon College Basic Skills Education Progress

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• Basic Skills English</td>

<td>40%</td>
</tr>
<tr>
<td>• Basic Skills ESL</td>
<td>46%</td>
<td>64%</td>
<td>60%</td>
<td>55%</td>
<td>84%</td>
</tr>
</tbody>
</table>

Note: Basic Skills Education Progress is the percentage credit students who started below transfer level in English, mathematics, and/or ESL and successfully completed a college-level course in the same discipline.

- Approximately one-third of the students who attempt a basic skills course in English later successfully complete a college-level English course. The rate has fluctuated over the years of this analysis with the most recent analysis yielding a rate of 33%.
- The rate for students who attempt a basic skills course in mathematics and who later successfully complete a college-level course in the same discipline has fluctuated over the years of this analysis within the range of 39% to 46%. In the most recent analysis, the rate is 40%.
- The rate for students who attempt a basic skills course in English as a Second Language and who later successfully complete a college-level course in the same discipline has fluctuated over the years of this analysis with the low point of 46% five years ago and the high point of 84% in the most recent analysis.
Data Set 59. Santiago Canyon College Career Technical Education (CTE) Rate

<table>
<thead>
<tr>

<tbody>
<tr>
<td>Career Technical Education Rate</td>
<td>52%</td>
<td>56%</td>
<td>61%</td>
<td>63%</td>
<td>64%</td>
</tr>
</tbody>
</table>

Note: The Career Technical Education Rate is the percentage of students who completed several career technical education courses in a single discipline and completed a degree, certificate, or transferred.

- The rate for students who completed several career technical education courses in a single discipline before transferring or earning a degree or certificate is 50% in the most recent analysis. This rate has fluctuated between 48% and 56% over the past decade.
### Data Set 60. Santiago Canyon College Degrees and Certificates Awarded by Race/Ethnicity, 2008–2012

</table>

- The number of associate degrees awarded by Santiago Canyon College was highest in 2011–2012, reaching 858 associate degrees awarded.
- The number of certificates awarded by Santiago Canyon College more than doubled between 2008–2009 and 2009–2010. The pattern over the past five years is one of steady increases, reaching a high of 1,083 in 2011–2012.
- The proportion of associate degrees awarded to students in each race/ethnic category has remained consistent over the past five years within these ranges:
  - African-American: 1% to 2%
  - Asian: 8% to 12%
  - White: 47% to 54%
  - Hispanic: 24% to 28%
  - Other: 6% to 12%
- Similarly, the proportion of certificates awarded to students in each race/ethnicity category has remained consistent over the past five years within these ranges:
  - African-American: 1% to 3%
  - Asian: 6% to 8%
  - White: 47% to 53%
  - Hispanic: 27% to 33%
  - Other: 5% to 10%

Source: Chancellor's Office, Datamart

Note: The Transfer Velocity Project tracked first-time college students who demonstrate that they intend to transfer by the courses they choose from their first academic year of enrollment to the point of transfer to a four-year institution. To be included in this transfer cohort, students must complete at least 12 units, including a transfer-level English or mathematics course within a 6-year period. The transfer rate was then based on the total number of students who transferred compared to the number of students in the cohort. The Research & Planning Group conducted the study between 2007 and 2009. More information on the Transfer Velocity Project is available at: http://webprod.cccco.edu/datamarttrans/dmtrnsstucsel.aspx

- Based on data in the Transfer Velocity Project, the proportion of students in each cohort who transfer to a university from Santiago Canyon College ranged from 37% to 32%, which was consistently above the statewide average in the same study.
Santiago Canyon College’s School of Continuing Education offers non-credit classes in various off-campus sites as well as at the Orange Education Center. The non-credit offerings include a full spectrum of continuing education courses for adult learners. These offerings include adult basic education, high school completion, parent education and vocational training, with the significant enrollments in English as a Second Language (39%) and non-credit career technical education (29%).

</tbody>
</table>

- In this five-year snapshot, the number of students attending the School of Continuing Education was at a peak in 2009 with 7,908 and was at its lowest in fall 2011 with 5,571 students. This decline is due to state-imposed reductions in the number of students funded and subsequent reductions in the number of sections being offered in recent years.

- Since a significant proportion of the students did not provide race/ethnicity data in each of these years, conclusions must be tentative. Of the students who provided race/ethnicity data, the proportion of students who identify themselves as Hispanic has increased, from 57% in 2008 to 70% in 2012. In a reverse of this pattern, the proportion of students who identify themselves as White has steadily decreased, from 26% in 2008 to 18% in 2012.

</tbody>
</table>

- In each of the past five years, approximately 60% of the students attending the Santiago Canyon School of Continuing Education have been 30 years old or older.
- The number of students aged 64 and over has declined dramatically from 17% or 1,078 students in 2008 to 8% or 459 students in 2012. The proportion of students in the other age categories has remained approximately the same over the past five years.
Data Set 66. Santiago Canyon College School of Continuing Education Students by Citizenship Status, 2008–2012

<table>
<thead>
<tr>

<td>-</td>
<td>2,839</td>
</tr>
</tbody>
</table>

Since 39% to 51% of the students did not provide citizenship information in each of these years, conclusions must be tentative. About half of the students attending the School of Continuing Education who provided citizenship information are United States citizens.
• The number of offerings was reduced in 2010–2011 due to state-imposed reductions in the number of students funded. The number of offerings was restored in 2011–2012.

• Despite the restoration in the number of offerings in the most recent year, the number of full-time equivalent students (FTES) in the School of Continuing Education’s non-credit offerings has declined each year since fall 2009.

Data Set 68. Santiago Canyon College School of Continuing Education Completion Rates and CASAS Learning Gains, 2009–2012

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>

<td>13,817</td>
</tr>
<tr>
<td>CASAS Learning Gains</td>
<td>6,403</td>
<td>6,883</td>
<td>5,777</td>
</tr>
</tbody>
</table>

Note: (1) Prior to 2010–2011, only two programs reported grades. Since then, a policy change required all departments to issue and report final grades to better track students’ successful completion of offerings required for certificates of completion. (2) The acronym CASAS is for Comprehensive Adult Student Assessment System which is an assessment tool used in California to measure gains in student learning as measured a gain of three to five points comparing a pre-test and post-test. A learning gain is also captured when a student earns a high school diploma, GED, or U.S. Citizenship. In addition, there are other assessments in which a learning gain can be captured through the English Language (EL) Civics program. Through EL Civics, students demonstrate that they have achieved competence in performing a civic task, such as writing to a legislator, participating in a city council meeting, visiting the post office or library, etc.

• The number of successful completions of non-credit offerings has increased over the past three years, despite the fluctuations in the number of offerings.
Data Set 69. Santiago Canyon College School of Continuing Education Awards, 2009–2012

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>

<td>3,609</td>
</tr>
<tr>
<td>General Education Development (GED)</td>
<td>212</td>
<td>175</td>
<td>140</td>
</tr>
</tbody>
</table>

Note: California transitioned to a standardized grading system in 2011–2012. This change resulted in the identification of a greater number of course/program completions.

- Awards of high school diplomas and general education development certificates were lower in 2011–2012 compared to the prior two years.
- Awards of program completion certificates have increased dramatically.
## Data Set 70. Santiago Canyon College Satisfaction Ratings by Credit Students, 2010–2012

Source: The Lewis Group, 2012

- Of the 400 community members who responded to a survey, 75% report satisfaction with their educational experiences at Santiago Canyon College.
The purpose of this section is to distill the key elements most relevant to educational planning drawn from the information presented in the first two chapters of the RSCCD Comprehensive Master Plan. These elements describe both opportunities and challenges for RSCCD’s planning for the next decade.

BACKGROUND

1. The Rancho Santiago Community College District (RSCCD) in Orange County encompasses approximately 193 square miles. This densely populated district of a little over one million residents includes the six cities of Anaheim, Garden Grove, Orange, Santa Ana, Tustin, and Villa Park. The population within RSCCD is projected to increase 6% between 2010 and 2020. The two most populated cities in RSCCD are Anaheim and Santa Ana and population in these cities is projected to increase 10% and 4% respectively (Data Set 1).

2. Five other community college districts within reasonable easy driving distance surround RSCCD. Given this proximity, students have multiple community college choices and there is considerable free flow of students among these six districts.

3. RSCCD is one of the largest community college districts in California, serving 27,910 credit students and 16,222 non-credit students in fall 2012. RSCCD includes two colleges, one of the state’s oldest community colleges, Santa Ana College, and one of its newest, Santiago Canyon College. Each college offers a full range of credit instruction and student services as well as non-credit offerings through off-campus sites. In addition, Santa Ana College offers regional career technical education programs for law enforcement, fire technology, and digital media.

4. Due to the economic recession, unemployment in the state and the region is high and the state continues to grapple with significant deficits that have resulted in reductions for higher education funding. This coupling of high unemployment with reduced revenue has been keenly felt at community colleges where student demand for services has increased at the same time that state funding has been reduced. Economists predict that the economic recovery will be slow but steady in the coming decade, including an increase in job growth in Orange County.
In addition to these economic realities, community colleges have also been in the spotlight due to both a national and state urgency regarding the low level of students’ completion of degrees and certificates and the documented racial/ethnic disparities in achievement. For all racial/ethnic groups, California ranks lower than many other states on the higher education achievements of its residents. Among the black and Latino students who attend community colleges, proportionately fewer black and Latino students (26% and 22% respectively) completed a degree or certificate within six years compared to White and Asian Pacific Islanders (37% and 35% respectively).

The graduation rates must increase in the coming decade to meet projected workforce requirements. Three recent initiatives to direct the energies of the California community college system toward improvement in degree and certificate completion rates are:

- The Report on the Commission on the Future studied the influences on student success and developed a set of recommendations for California and its colleges;
- The Student Success Task Force studied best practices and proposed initiatives that promise to improve students’ successful completion of degrees and certificates; based on their findings, recent legislation (SB1456) requires colleges to implement some of those best practices, such as providing intensive orientation to help new students establish their educational goals; and
- The Student Transfer Achievement Reform Act (SB 1440) is intended to improve California’s degree completion rates by removing barriers and clarifying the path to transfer to state public universities.

The current population within RSCCD (1,048,961) is projected to increase by a little over 65,939 additional residents (6%) by 2020. In the two most populated cities in RSCCD, Anaheim and Santa Ana, the population is projected to increase 10% and 4% respectively (Data Set 1).

There is not a majority race/ethnic cohort in Orange County in 2010. The proportion of White residents is the highest (44%) followed by Hispanic (34%) and Asian (18%). The county’s population is projected to be made up of the same three race/ethnicity cohorts in the same order in 2020, although the proportions will shift with White residents the highest at 39%, followed by Hispanic at 35% and Asian at 22% (Data Set 2).
9. The race/ethnicity pattern of residents who live within RSCCD boundaries is comparable to the pattern in Orange County as a whole with two exceptions: there is a significantly higher proportion of Hispanic residents within RSCCD boundaries (55%) than in the total county (34%) and a significantly lower proportion of White residents within RSCCD boundaries (24%) than in the total county (44%) (Data Set 3). Based on a fall 2010 comparison of RSCCD credit student population with the general population living with RSCCD boundaries in 2010, the race/ethnicity of the RSCCD credit student population approximates the community population with three minor differences: a higher proportion of both Asian and Hispanic residents compared to the student population (Asian: 17% versus 13%; Hispanic: 55% versus 54%); and a slightly lower proportion of residents selecting White and “Other” category of race/ethnicity compared to the student population (White: 24% versus 27%; “Other”: 2% versus 4%) (Data Set 5).

10. Overall in Orange County, the population is projected to increase for all ages except the 15-19 and 40-49 cohorts; these cohorts are projected to decline 11% and 10% respectively. Residents in the 60 and older age cohort in Orange County are projected to increase the most in this decade (34%) (Data Set 7). In five of the six cities within RSCCD boundaries, the proportion of residents in each age cohort is similar: about a quarter of the population is younger than 14 years old; the 15 to 19 age cohort represents the lowest proportion of the population; and the remainder of the population is distributed almost evenly across the other age cohorts. In Villa Park the highest proportion of residents is age 60 or older and lowest proportion of residents is between the ages of 30 to 39 (Data Set 8).

11. Four of the six communities within RSCCD boundaries have a lower proportion of residents who speak only English at home (40%, 34%, 17%, and 49%) compared to the county and the state proportions (56% and 57% respectively). These four communities make up 87% of the total population within RSCCD boundaries (Data Set 9).

12. The communities within RSCCD significantly differ from one another in the socio-economic measure of median household income. The median household income for Anaheim, Garden Grove, and Santa Ana are below or slightly above the state median household income of $60,883 ($57,807, $54,877, and $61,026 respectively). Orange and Tustin are above the state median household income at $76,742 and $73,170 respectively. The median household income for Villa Park is more than double the state median household income at $146,776 (Data Set 10).

13. The proportion of adults who have not attended college at all is significantly higher in Anaheim, Garden Grove, and Santa Ana compared to the state and the county proportions (48%, 51%, and 69% respectively) (Data Set 11).
2.68 LOCAL ECONOMIC TRENDS

14. Of the projected top ten fastest growing occupations in Orange County over the next decade, six of them require postsecondary education (Data Set 12).

15. In 2012, the number of jobs and nonfarm payroll is below pre-recession rate in all sectors except leisure & hospitality and education & health services (Data Set 13). Economists predict that job growth in Orange County will increase or will remain stable in every sector over the coming decade (Data Set 14).

16. The number of employees within every employment category in RSCCD has fluctuated over the past seven years with 2007–2008 the highest year in most categories and 2011–2012 the lowest.

17. Due to state-imposed reductions in the number of students funded, the number of sections of credit and non-credit courses has been reduced over the past five years. This reduction in the number of sections consequently resulted in reduced student headcount and the number of full-time equivalent students. Comparing fall 2011 and fall 2012, there was a 5% restoration in the number of on-campus credit sections, but the number of non-credit offerings were reduced an additional 9% in fall 2012. The average number of enrollments per student has increased significantly in the past five years from 2.6 to 3.5 (Data Sets 17 and 18).

18. The majority of Santa Ana College credit students are Hispanic (63% in fall 2012). The next largest racial/ethnic groups in the credit student population are White and Asian at 15% and 12% respectively (Data Set 19). This distribution of the population by racial/ethnic categories reflects the distribution of residents who live in Anaheim and Santa Ana.

19. The proportion of students in traditional college-going ages (ages 18 – 25) has increased each year from 2008 to 2012 (Data Set 21). Mirroring this age trend, the proportion of students seeking an associate degree or transfer without a degree has increased each year from 40% in 2008 to 64% in 2012 and the number of first-time college freshman between the ages of 17 and 19 has increased each fall since 2008 (Data Set 22).

20. The majority of Santa Ana College students who complete placement tests in English and mathematics score below transfer level (Data Set 25).

SANTA ANA COLLEGE DATA

19. The proportion of students in traditional college-going ages (ages 18 – 25) has increased each year from 2008 to 2012 (Data Set 21). Mirroring this age trend, the proportion of students seeking an associate degree or transfer without a degree has increased each year from 40% in 2008 to 64% in 2012 and the number of first-time college freshman between the ages of 17 and 19 has increased each fall since 2008 (Data Set 22).

20. The majority of Santa Ana College students who complete placement tests in English and mathematics score below transfer level (Data Set 25).

21. For fall 2011, the rate of successful course completion for Santa Ana College students in credit courses at 71% was higher than the statewide average of 66%. Similarly, the student retention rate at 84% was higher than the statewide average of 80% (Data Set 26). Comparing the college on the same benchmark rates for distance education credit courses, the rates for Santa Ana College students match the statewide average for successful completion of distance education courses (both are 58%) and are below the statewide average on retention in distance education courses (73% compared to 78%) (Data Set 27). Both of these measures are lower for distance education courses than for traditionally taught courses.
22. In the Student Success Scorecard measures, the Completion Rate for Santa Ana College students has consistently hovered near 50% when prepared and remedial students are combined. However, the Completion Rate for Santa Ana College prepared students is twice as high as that for remedial students (Data Set 28). The persistence rates for both prepared and remedial students are similar at 74% and 72% respectively in the most recent analysis (Data Set 29). The proportion of students who complete an English course below transfer level and subsequently complete a transfer English course is 26%. On a similar assessment of the non-credit to credit course completion in English as a Second Language, the rate is 42% (Data Set 30). The career technical education rate was at a high point of 56% in the period ending 2009 – 2010, but has dropped to 50% in the last two assessments (Data Set 31).

23. A little over 1,500 associate degrees and almost 1,300 credit certificates were awarded by Santa Ana College in 2011 – 2012 (Data Set 32). The race/ethnicity of these degree-earners is proportional to the representation of those race/ethnicity groups in the total student population.

24. The number of Santa Ana College students who transfer to universities has increased dramatically from 1,394 in 2006–2007 to 2,229 in 2011 – 2012 (Data Set 33).

25. Based on fall 2012 data, student demographics at the Santa Ana College School of Continuing Education show that the predominate racial/ethnic group is Hispanic (86%); there are slightly more female students (56%); and the largest proportions of students are between ages 30 and 64 (Data Sets 35, 36, and 37).

26. The ratings of Santa Ana College are largely positive (Data Sets 42, 43 and 44):
   - 89% of the 626 students taking credit courses in 2012 reported satisfaction with their overall experience;
   - 89% of the 869 students taking non-credit courses in 2012 reported satisfaction with their overall experience; and
   - 55% of the 400 community members who responded to a survey in 2012 rated the quality of education provided by Santa Ana College as “excellent” or “good.”
29. The proportion of students in traditional college-going ages (ages 18 – 25) increased from 2008 to 2012 (Data Set 49). Mirroring this age trend, the proportion of students seeking an associate degree or transfer without a degree has increased each year from 48% in 2008 to 66% in 2012 and the number of first-time college freshman between the ages of 17 and 19 has increased each fall since 2009 (Data Set 50).

30. The majority of Santiago Canyon College students who complete placement tests in English and mathematics score below transfer level (Data Set 53).

31. For fall 2011, the rate of successful course completion for Santiago Canyon College students in credit courses at 70% was higher than the statewide average of 66%. Similarly, the student retention rate at 84% was higher than the statewide average of 80% (Data Set 54). Comparing the college on the same benchmarks rates for distance education credit courses, the rates for Santiago Canyon College students are lower than the statewide average for successful completion of distance education courses (55% versus 58%) and higher than the statewide average on retention in distance education courses (83% versus 78%) (Data Set 55). Both of these measures are lower for distance education courses than for more traditionally taught courses.

32. In the Student Success Scorecard measures, the Completion Rate for Santiago Canyon College students has been in the 56% - 58% range over the past five assessment periods when prepared and remedial students are combined. However, the Student Completion Rate for Santiago Canyon College prepared students is almost twice as high as that for remedial students (Data Set 56). The persistence rate for remedial students at 75% in the most recent analysis is higher than the persistence rate for prepared students at 66%. The proportion of students who complete an English course below transfer level and subsequently complete a transfer English course is 33% in the most recent analysis. On a similar assessment of the non-credit to credit course completion in mathematics and English as a Second Language, the rates are 40% and 84% respectively (Data Set 58). The career technical education rate was at a high point of 64% in the period ending 2011–2012 (Data Set 59).
33. Santiago Canyon College awarded 858 associate degrees and 1,083 credit certificates in 2011 – 2012 (Data Set 60). The race/ethnicity of these degree-earners is proportional to the representation of those race/ethnicity groups in the total student population.

34. The number of Santiago Canyon College students who transfer to universities has increased slightly from 890 in 2006–2007 to 915 in 2011 – 2012 (Data Set 61).

35. Based on fall 2012 data, student demographics at the Santiago Canyon College School of Continuing Education show that the predominate racial/ethnic group is Hispanic (70%); there are slightly more female students (53%); and the largest proportions of students are between ages 30 and 64 (Data Sets 63, 64, and 65).

36. The ratings of Santiago Canyon College is largely positive (Data Sets 70, 71, and 72):
   - 90% of the 258 students taking credit courses in 2012 reported satisfaction with their overall experience;
   - 94% of the 1,224 students taking non-credit courses in 2012 reported satisfaction with their overall experience; and
   - 75% of the 400 community members who responded to a survey in 2012 rated the quality of education provided by Santa Ana College as “mostly positive.”
PROFILE OF THE DISTRICT COMMUNITY + STUDENTS
IMPLICATIONS FOR PLANNING
(CONTINUED)

SUMMARY OF THE IMPLICATIONS FOR PLANNING

This profile of the RSCCD community and its students highlights many benefits and successes including the following:

- A headcount of 27,910 credit students and 16,222 non-credit students in fall 2012.
- A service area population that is projected to grow by 6% in the coming decade.
- A need for the educational opportunities offered by colleges given the low level of adults’ educational attainment within RSCCD boundaries.
- Strong community outreach through a diverse range of noncredit programs.
- A youthful student population with the majority of students aged 29 or younger.
- Improving rates of students transferring to four-year institutions.
- High ranking of satisfaction with the colleges in surveys of credit students, non-credit students, and community members.

Five primary challenges for California community colleges are identified in Chapter 1 of this document. Based on data from internal and external scans presented in this chapter, those challenges are also RSCCD’s challenges in the coming decade.

1. Increase in Student Demand: How can RSCCD serve a greater number of students?

RSCCD’s population is projected to grow by 6% by 2020. RSCCD reduced the number of both credit and non-credit offerings in response to state-imposed workload reductions. But this reduction is contrary to the reality that the communities served by RSCCD are continuing to grow in population. This population growth is especially challenging because the two cities projected to experience the greatest amount of population growth (Anaheim and Santa Ana) are the cities with the lowest median household income and the lowest levels of educational attainment for adult residents. These demographic trends are important factors to consider in RSCCD planning for the credit and non-credit programs.

In addition to an increase in population within RSCCD boundaries, the Great Recession has created an increase in student demand in two ways. First, adults are seeking career training to enhance their employment opportunities. Second, the state’s universities have reduced the number of students in their freshman classes.

2. Emphasis on Degree and Certificate Completion: How can RSCCD support student completion of degrees and certificates?

Economists project that approximately 60% of tomorrow’s jobs will require postsecondary education. An educated workforce is needed to meet those demands and to help return the state and nation to economic stability. Although current rate of degree and certificate completion at RSCCD is similar to other California community colleges, this rate is insufficient to meet the projected workforce needs.

Consequently, at the national level, President Obama set a target for each community college to triple the number of degrees and certificates awarded by 2020 and, at the state level, the Governor proposed in January 2013 that a plan be developed to base apportionment funding on degree and certificate completion rather than student enrollment at census.

Completion of degrees and certificates is a unique challenge within RSCCD because:

- About half of the residents who live within RSCCD boundaries do not speak English at home.
- The relatively low level of educational attainment of the residents who live within RSCCD boundaries make it less likely that there is at-home support for the pursuit of degree completion, and
- The majority of the students entering RSCCD colleges place below transfer-level in English and mathematics.
3. California Achievement Gap: How can RSCCD support all students’ success?

A recent statewide study provided evidence that among the African-American and Latino students who attend community colleges, proportionately fewer African-American and Latino students (26% and 22% respectively) completed a degree or certificate within six years compared to White and Asian Pacific Islanders (37% and 35% respectively). Proportionately, twice as many White students transfer to a four-year university than Latino students.

The race/ethnicity pattern in RSCCD’s student population is a close approximation of the race/ethnicity of the population within RSCCD cities. In fall 2010, the slight differences are: a higher proportion of both Asian and Hispanic residents in the community compared to the student population (Asian: 17% versus 13%; Hispanic: 55% versus 54%) and a slightly lower proportion of both White and “Other” residents in the community compared to the student population (White: 24% versus 27%; Other: 2% versus 4%). Given these patterns of race/ethnicity distribution in the community and the student population, in RSCCD the achievement gap challenge is indistinguishable from the challenge to increase degree and certificate completion.

4. Adult Education Challenge: How can RSCCD meet the community’s needs for adult education?

A December 2012 report from the Legislative Analyst’s Office called for a restructuring of adult education programs statewide. Although the implications of this restructuring for RSCCD’s continuing education programs are unknown at this early stage, changes in policy and/or regulations are likely.

RSCCD serves a little over 16,000 students each semester, making it one of the largest adult education programs in California. The largest programs are English as a Second Language and vocational education. Given the educational attainment levels of the majority of the residents in the two largest cities in the district, the need for a program of continuing education for adult learners will remain high. However, state funding for non-credit programs is uncertain.

5. Fiscal Challenge: How can RSCCD meet the increasing and wide-ranging needs of its community with reduced levels of state funding?

California community colleges have experienced five years of decline in state apportionment and funding for categorical programs, resulting in an overall decrease of 12% in the state funding for RSCCD. Although the Governor’s 2013 budget proposal includes a 5% increase in state apportionment for community colleges, there will be no restoration of the funding that has been lost over the past five years.

If the state’s budget remains solvent, the recovery in the level of state apportionment is likely to continue. Despite that recovery, the survival of state-supported systems, such as community college districts, is contingent on their ability to develop and implement sustainable cost-saving practices and to base fiscal decisions on data-driven planning.

The specific fiscal challenges for RSCCD are how to:

- Provide sufficient resources to maintain viable programs and services
- Acquire and retain qualified faculty and staff
- Maintain and develop adequate facilities
- Acquire and maintain appropriate technology
RSCCD Goal 1
RSCCD will assess the educational needs of the communities served by RSCCD and will adjust instructional programs, offerings, and support services and will allocate resources as needed to optimize the alignment of students’ needs with services and fiscal resources.

RSCCD Goal 2
RSCCD will assess the educational needs of the communities served by RSCCD and then pursue partnerships with educational institutions, public agencies, non-profit organizations, and business/industry/labor to collaboratively meet those needs.

RSCCD Goal 3
RSCCD will annually improve the rates of course completion and completion of requirements for transfer, degrees, certificates, and diplomas.

RSCCD Goal 4
RSCCD will support innovations and initiatives that result in quantifiable improvement in student access, preparedness, and success.

RSCCD Goal 5
RSCCD will use a cycle of integrated planning that will demonstrate the effective use of resources.
OVERVIEW
RSCCD Goal 1
RSCCD Goal 2
RSCCD Goal 3
RSCCD Goal 4
RSCCD Goal 5
The RSCCD Comprehensive Master Plan is grounded in an analysis of quantitative and qualitative data. This analysis, presented in the previous two chapters, resulted in the identification of five current and anticipated challenges:

1. How can RSCCD serve a greater number of students?
2. How can RSCCD support student completion of degrees and certificates?
3. How can RSCCD support all students’ success?
4. How can RSCCD meet the community’s needs for adult education?
5. How can RSCCD meet the increasing and wide-ranging needs of its communities with reduced levels of state funding?

These five challenges create the context for the development of district-wide institutional goals. RSCCD Goals are developed as a response to these challenges. The goals are broad enough to be relevant through the next decade yet specific enough to provide clear direction for planning across the district. These goals unify RSCCD’s collective energies and serve as a guide for the RSCCD’s decision-making and use of resources for the next ten years.

The RSCCD Goals are the starting point for the next steps in the RSCCD Planning Design:

- As the basis for the RSCCD Strategic Plan to identify objectives for those projects that require district-wide collaboration and
- As the basis for college goals.

The RSCCD 2013 Planning Design Manual describes the ongoing and systematic cycle of evaluation, integrated planning, resource allocation, implementation, and re-evaluation including methods for assessing progress on the RSCCD Goals.

This chapter presents the RSCCD Goals for 2013-2020 and describes how each goal is a response to current and anticipated challenges.
RSCCD GOAL 1

RSCCD will assess the educational needs of the communities served by RSCCD and will adjust instructional programs, offerings, and support services and will allocate resources as needed to optimize the alignment of students’ needs with services and fiscal resources.

Grounded in an awareness of the projected changes in RSCCD’s communities, RSCCD Goal 1 articulates a commitment to continually assess the demographic changes in the communities and to make adjustments as needed in instructional programs, such as monitoring the balance between credit and non-credit offerings.

There are four primary indicators that student demand for higher education will increase over the next decade:

- The populations of all communities within RSCCD boundaries are projected to increase.
- The greatest population growth is projected for Anaheim and Santa Ana, the two communities with the lowest levels of educational attainment for adult residents and therefore the greatest need for both adult education and higher education.
- Specialists in workforce trends project that 61% of California’s jobs will require postsecondary education as soon as 2018, which will likely increase demand from incoming freshmen as well as adults seeking career advancement.
- As a result of reductions in state funding, California’s public universities have reduced the number of students in their freshman classes, which is likely to increase the demand for transfer programs at community colleges.

Due to the Great Recession, state apportionment for California community colleges has decreased, a 12% reduction in total resources for RSCCD. The state reduced the number of students being funded and therefore the two RSCCD colleges reduced the number of credit and non-credit offerings. As a result, RSCCD has not been able to meet current student demand.

The anticipated slow restoration of state funding coupled with the anticipated increased student demand makes it necessary for RSCCD to ensure that its resources are dedicated to meeting documented student needs.
RSCCD GOAL 2

RSCCD will assess the educational needs of the communities served by RSCCD and then pursue partnerships with educational institutions, public agencies, non-profit organizations, and business/industry/labor to collaboratively meet those needs.

RSCCD Goal 2 prioritizes collaboration with community partnerships as a strategy to meet student demand with limited resources.

RSCCD has a well-established track record of providing educational programs and services to the community through partnerships with public agencies, local businesses, community, and labor organizations. Programs such as Santa Ana College’s fire technology and criminal justice academies, and Santiago Canyon’s apprenticeship programs extend RSCCD’s reach beyond its district boundaries and provide a cost-effective means of providing educational services.

Drawing from the successes of these programs, RSCCD will seek additional partnerships that will allow the colleges to expand their services. For example, a partnership with K–12 districts that improve students’ preparedness for college-level studies would allow RSCCD to focus funds on transfer level programs.
RSCCD Goal 3 is the institutional commitment to focus energies and programs on student completion of requirements needed for students to transfer or earn degrees, certificates, and diplomas.

The low number of students who complete degrees and certificates is a top concern across the nation and the state. The United States has a lower level of educational attainment than do other large, industrialized nations. In California, only 54% of the students who enter a community college with the goal of earning an associate degree reach that goal. The American Graduation Initiative challenges all community colleges to triple the number of degrees and certificates awarded by 2020. To meet this challenge, each college would need to increase the number of degrees and certificates awarded by 12% per year for each of the next ten years.

The need for degree completion is underscored by the projection that approximately 60% of tomorrow’s jobs will require postsecondary education. An educated workforce is needed to meet the demands of business and industry. The current rate of degree and certificate completion at RSCCD is insufficient to meet the projected workforce needs in Orange County, where six of the top 10 fastest growing occupations require postsecondary education.
RSCCD also has an ethical commitment to increasing student completion of requirements for transfer, degrees, certificates, and diplomas given the race/ethnicity patterns of its student population. The majority of Santa Ana College credit students are Hispanic (63% in fall 2012) and the majority of Santiago Canyon College students credit students in fall 2012 are either Hispanic (41%) or White (39%). A recent statewide study provided evidence that among the African-American and Latino students who attend community colleges, proportionately fewer African-American and Latino students (26% and 22% respectively) completed a degree or certificate within six years compared to white and Asian Pacific Islanders (37% and 35% respectively). Given these patterns of race/ethnicity distribution in the community and its student population, in RSCCD improving the overall completion rates and closing achievement gaps among historically underrepresented students are co-equal goals.

Tripling the number of degrees and certificates completed by 2020 is a daunting task for RSCCD given that about half of the residents who live within its boundaries do not speak English at home and the majority of the students completing placement tests in English and mathematics score below transfer level.

RSCCD Goal 3 includes increasing the number of diplomas awarded in its adult education programs. RSCCD is one of the largest adult education providers in California, serving almost 16,000 students each semester. The largest programs are English as a Second Language and vocational education. Given the educational attainment levels of the majority of the residents in the two largest cities in the district, the need for a program of continuing education for adult learners will remain high as a gateway to employment.
RSCCD GOAL 4
RSCCD will support innovations and initiatives that result in quantifiable improvement in student access, preparedness and success.

Given the challenges to serve more students with reduced funding and to increase students’ completion of transfer requirements, degrees, certificates, and diplomas, RSCCD realizes that changes in past practice may be needed. RSCCD Goal 4 articulates its commitment to rely on innovations and best practices to produce the desired outcomes.

In recent years, three statewide initiatives have been helpful in identifying policies and practices that have proven to facilitate student success:

• The Basic Skills Initiative provided support for identifying innovative practices that result in improvements in student success. The resulting document, the Basic Skills Handbook, summarizes effective strategies for teaching basic skills English, English as a Second Language, reading, and mathematics. (http://www.cccbsi.org/basic-skills-handbook)

• The Report on the Commission on the Future reports on the analysis of 24 influential reports on student success. These reports explored various influences on student success: the impact of fiscal and academic policies, best practices, and state and local accountability. Based on their analysis, the Commission offered 17 recommendations of strategies to address the challenges facing California’s community colleges. (http://www.cccvision2020.org)

• The Student Success Task Force studied strategies for facilitating students’ successful completion of transfer requirements, degrees, and certificates. In their final report, they offer 22 recommendations for changes at the institutional and state levels that have the potential to increase student success. (http://californiacommunitycolleges.cccco.edu/PolicyInAction/StudentSuccessInitiative.aspx)

Each of these initiatives call for changes in some of the traditional methods of admitting students, advising them in their educational plans, and providing instruction. Authentic, transformative change requires that there is district-wide awareness of and support for such changes.
**RSCCD GOAL 5**

RSCCD will use a cycle of integrated planning that will demonstrate the effective use of resources.

RSCCD Goal 5 prioritizes the implementation and assessment of cost-saving measures through its planning design cycle as a strategy to meet increased student demand with limited resources.

After several successive years of reductions in state allocations, there was additional funding rather than a decrease in the current fiscal year and the Governor’s 2013 budget proposal includes a 5% increase in state apportionment for community colleges. However, there will be no restoration of the funding that has been lost over the past five years.

In these years of resource reductions, RSCCD made the necessary reductions across its budget, including reducing the number of full-time employees in each employment category. The continued survival of state-supported systems, such as community college districts, is contingent on their ability to develop and implement sustainable cost-saving practices and to base fiscal decisions on data-driven planning.
RSCCD Goal 1
RSCCD will assess the educational needs of the communities served by RSCCD and will adjust instructional programs, offerings, and support services and will allocate resources as needed to optimize the alignment of students' needs with services and fiscal resources.

RSCCD Goal 2
RSCCD will assess the educational needs of the communities served by RSCCD and then pursue partnerships with educational institutions, public agencies, non-profit organizations, and business/industry/labor to collaboratively meet those needs.

RSCCD Goal 3
RSCCD will annually improve the rates of course completion and completion of requirements for transfer, degrees, certificates, and diplomas.

RSCCD Goal 4
RSCCD will support innovations and initiatives that result in quantifiable improvement in student access, preparedness, and success.

RSCCD Goal 5
RSCCD will use a cycle of integrated planning that will demonstrate the effective use of resources.
PRESIDENT’S MESSAGE

OVERVIEW OF THE EDUCATIONAL MASTER PLAN (EMP)

FACILITIES

- Main Campus
- Centennial Education Center
- Digital Media Center
- Sheriff’s Regional Training Academy
- Fire Academy Training Centers
Dear SAC Community and Friends,

As Santa Ana College (SAC) prepares to celebrate its centennial in 2015, we provide a Comprehensive Master Plan as an opportunity for reflection, analysis, and planning. And as we emerge from a period of budget constraints, it is important to stabilize and reinvent our operation to reflect current realities and expectations. Santa Ana College remains committed to providing quality instruction, valuable support services, and modern facilities for our students.

Santa Ana College continues to excel in academic achievement and maintain a spirit of innovation and responsiveness as new needs emerge. Overall, Santa Ana College ranks 8th in the nation for the number of certificates awarded to Hispanic students and 12th in the awarding of Associate of Arts degrees according to The Hispanic Outlook in Higher Education Magazine. The College was ranked 14th nationally amongst two- and four-year colleges and universities that enrolled and supported Hispanic students. Santa Ana College offers a rich array of vocational and transfer programs. Several programs are separately accredited by professional organizations such as The American Bar Association for the Paralegal Program and the Accreditation Commission for Education in Nursing (ACEN) for the Nursing Program to name just two. In addition, Santa Ana College has a robust non-credit program with a hub at the Centennial Education Center. From this hub, SAC has expanded to provide academic and support services to over 100 other locations. Finally, the establishment of programs such as the Adelante Program and Upward Bound for veterans demonstrates the College’s commitment to developing new pathways for students and serving new populations as they emerge at the campus. Santa Ana College is deeply committed to credit and non-credit instruction as it serves the needs of its immigrant community.
In 2002 and again in 2012 the voters in Santa Ana approved a General Obligation Bond for facilities improvement. At present, the College is actively engaged in facilities projects that include renovations to Dunlap Hall and Johnson Center, as well as, planning for a new science building and central plant. The College must modernize campus facilities to accommodate technology and address sustainability as we improve the aesthetics of the campus. The bond projects will continue to be a focus of physical planning activities.

In a very challenging environment, Santa Ana College provides education opportunities and advantages that impact countless lives in countless ways. It is anticipated that SAC will continue to do so into the next decade and beyond.

ERLINDA J. MARTÍNEZ, ED.D
PRESIDENT,
SANTA ANA COLLEGE
This Educational Master Plan (2007–2015) (EMP) serves as an updated version of the original EMP which was approved in 2008. The focus of the plan is on the following key areas:

- The Educational Master Plan, through the integration of all college plans which include the Strategic Plan, Facilities Master Plan, Budget and Resource Allocation Plan, Technology Plan will provide the college with defined goals and processes that will assist the college in the integration of practice and operations.

- Commitment to the consistent evaluation of campus planning to encourage a cycle of continuous improvement in student learning and program outcomes.

- Guide the college in developing new pathways for students and serving new populations as they emerge on campus and in the community.

- The integration of planning that aligns with the mission and vision of the College and the allocation of fiscal, physical, and human resources.

- Commitment to excel in academic achievement and maintain a spirit of innovation and responsiveness.
The SAC Strategic Plan identifies and prioritizes goals in six thematic areas. Within each of these six thematic areas, the college developed measureable goals to improve college operations and student success. The annual update of the Strategic Plan allows the campus community to meet and confer about the progress on the goals. Revisions and updates to the goals and strategies for achieving them are made appropriately. The six thematic areas in which campus goals are developed include:

- **Student Achievement**
  - Transfer and Program Completion
  - Excellence in Teaching and Learning
  - Literacy Across Disciplines
  - Credit/Non-credit Articulation
  - Eliminate Economic Barriers for Students

- **Use of Technology**
  - Student access and use
  - College Environment
  - Classrooms

- **Innovation**
  - Course, program, degree-level; Student Services; Administrative Services
  - Embrace scholarship and inquiry
  - Access and outreach

- **Community**
  - Access/Motivation
  - Community/Family Involvement
  - Lifelong Learning
  - Healthful Living Environment

- **Workforce Development**
  - Partnerships and Relationships
  - Skills Across the Curriculum
  - Skilled Employees
  - Practical Work Experience
  - Career and Educational Pathway Planning

- **The Emerging American Community**
  - Local and Global Responsibility
  - Cross-cultural Education
  - Cross-disciplinary Collaboration
  - Increase Green Efforts
  - Transparency and Accountability

The Educational Master Plan is organized in the following manner:

- **Introduction and organizational structure**
- **Mission statement for Santa Ana College and vision statement for Rancho Santiago Community College District**
- **Background research and data collection with analysis**
- **Planning documents**
- **Goals and strategies**

The Educational Master Plan reflects the ongoing work of the Institutional Effectiveness and Assessment Committee, which operates within the participatory governance structure of Santa Ana College. This Committee monitors and evaluates college-planning efforts and recommends improvements, as appropriate, to College Council. The Strategic Plan is discussed and updated annually, after input from campus constituents at an all campus retreat each spring. Revisions to other planning documents are also updated during a three-five year period. As specific planning documents that make up the EMP are updated, the EMP is refreshed. The updated EMP will provide a basis for our integrated planning model, and will help the campus community develop and assess specific goals and strategies that address the defined focus areas.

Santa Ana College will celebrate its centennial in 2015 and is committed to the continuous improvement in student learning and outcomes that reflect the changing environment in our community and higher education. With the focus on increased student transfer, completion of career and technical programs, and the transition of pre-collegiate and adult learners into degree, certificate, and transfer programs demonstrate the college’s commitment to provide excellence in instruction, valuable student support services, and high quality facilities.
The history of the College’s facilities is linked to its evolving role within its rapidly growing community. As a department of Santa Ana High School, Santa Ana Junior College opened its doors in 1915, first on the high school campus and then at a site on North Main Street when the high school was damaged in the earthquake of 1933. A bond issue passed by the voters in 1945 provided funds for the development of a new campus and in 1947 the College moved to the current location of its main campus at the corner of West 17th and North Bristol Streets.

The College separated from the Santa Ana Unified School District in 1971 and the Rancho Santiago Community College District (RSCCD) was established to serve central and eastern Orange County. RSCCD currently serves residents of the cities of Santa Ana, Anaheim, Garden Grove, Orange, Villa Park, and Tustin. In 1980 the Centennial Education Center opened in Centennial Regional Park to house the School of Continuing Education. In 1985 the Orange Campus was established in the eastern foothills of the City of Orange, near the growing communities of eastern Orange County. For a time, the College took the name Rancho Santiago College with two main campuses, the Santa Ana Campus and the Orange Campus.
SANTA ANA COLLEGE

(continued)

FACILITIES

In 1996 the RSCCD Board of Trustees voted to become a multi-college district. The Orange Campus became Santiago Canyon College, which achieved full accreditation in 2000. The Santa Ana campus became the main campus of Santa Ana College.

The 2002 passage of the RSCCD Measure E local bond by the voters of RSCCD provided funds to build new facilities for both colleges. New buildings were constructed at the main campus of Santa Ana College and two new education center sites – the Digital Media Center and the Orange County Sheriff’s Regional Training Center – both of which opened in 2005. The support of the voters and the passage of Measure Q in 2012 will help enable the College to meet future needs with state-of-the-art facilities as Santa Ana College nears its celebration of 100 years of service.

The graphic on the opposing page illustrates the locations of the College’s main campus and education centers. In addition to these locations, Santa Ana College provides instruction at many sites throughout the community, including the Santa Ana Unified School District, hospitals, churches, and community centers.

INSTRUCTIONAL SITES

- Santa Ana College main campus, established 1947
- Centennial Education Center, established 1980
- Digital Media Center, established 2005
- Orange County Sheriff’s Regional Training Academy, established 2005
- Fire Academy Training Centers / Joint Powers Training Center / North Net Training Center

SPACE INVENTORY

- Overall gross built area: 671,042 OGSF
- Built assignable area: 489,206 ASF

Source: California Community Colleges Chancellor’s Office (CCCCO) Facility Utilization Space Inventory Option Net, SAC 2012 Space Inventory
The main campus of Santa Ana College resides on the broad, coastal plain near the Santa Ana River in the city of Santa Ana, California. In the years since Santa Ana College moved to its home at the corner of West 17th and North Bristol Streets, the city has grown around it to become one of the densest urban communities in the nation. The campus has also grown, expanding to the south of Campus Road and to the west of College Avenue and increasing in size from 48 to 65 acres.

Throughout the first decade of the 21st century, the main campus has been in a phase of active planning and development. The next few pages describe the recent facilities planning, design, and construction projects that have been undertaken to ensure that future campus development aligns with the college’s academic vision and goals and is guided by a solid set of facilities planning principles.

**BUILT AREA:** 578,874 OGSF

**BUILT ASSIGNABLE AREA:** 430,388 ASF

*Source: California Community Colleges Chancellor's Office (CCCCO) Facility Utilization Space Inventory Option Net, SAC 2012 Space Inventory*
The 2011 Facilities Master Plan (FMP) was created through a highly participatory process, to serve as a guide for future campus development. It describes the College’s strategy to develop facilities that will support the initiatives of the 2007 Educational Master Plan and address the projected future growth in enrollment. The FMP positions the College to maximize funding opportunities, including the framing of the Measure Q local bond proposal that was approved by the voters in November 2012. 

**PLANNING CHALLENGES**

In 2010 and 2011, a master plan committee, representing the College’s many constituencies, participated in a series of interactive meetings to review information and evaluate options. One of the initial responsibilities of the committee was to review the analysis of existing conditions, challenges, and opportunities, which are summarized below.

- Additional facilities and parking are needed to accommodate the projected enrollment.
- A number of temporary classrooms and labs are in use.
- Many existing buildings need to be modernized in the next decade.
- Most of the buildings were built between 1950 and 1990, with some of the oldest buildings clustered in what is now the center of the campus.
- The edges of the campus, which face the community, are not visually appealing. The back sides of many buildings face the community and block the view of the green and inviting central mall.
- Although the campus area has grown over the years, the ratio of students enrolled to campus acreage is considered high, making it a priority to maximize the efficient use of the campus.
- A framework is needed to extend the campus development into underutilized areas and create strong linkages across the campus.
- As they have grown, many student services and student activities functions have become scattered across campus, displacing other functions and complicating student access and the sharing of resources.
- The campus has outgrown its aging site utilities infrastructure and needs to become more sustainable.
PLANNING SOLUTIONS

The 2011 Facilities Master Plan recommends a list of facilities and site improvement projects, as well as a phased and logical sequence of development. The projects are intended to do the following.

- Build facilities that are needed to support the projected enrollment.
- Welcome students and the community into the campus by improving its edges, creating welcoming entry points, and projecting a positive visual presence to the community.
- Create a strong framework for future development that links all parts of the campus together.
- Reinforce the character and sense-of-place that is unique to Santa Ana College.
- Improve the zoning of instructional disciplines, functions, and services.
- Create places for students, faculty, and staff to study, gather, and collaborate.
- Improve vehicular and pedestrian circulation flow and safety.
- Design the campus to be environmentally sustainable. Provide campus-wide space cooling with a central chiller plant.
- Develop a robust site utilities infrastructure that will support existing and future campus development.
The 2011 Santa Ana College Facilities Master Plan is intended to be a living document to be adjusted as the College’s needs evolve. In December 2012, Santa Ana College reconvened the master plan committee to consider the following.

http://www.sac.edu/AdminServices/facilities/Documents/2013-02-11%20SAC%20Facil%20Steering%20Committee%20FINAL.pdf

- More detailed planning of facilities for existing and new academic programs.
- A more central location for the Vocational Technology Complex.
- The replacement of Nealley Library with a new Library/Learning Resources Center.
- A home for the School of Continuing Education on the main campus.
- An additional Interdisciplinary Instructional Building.
- The renovation or replacement of Johnson Center.
- A location for the Central Chiller Plant.

The following list of facilities and site improvement projects resulted from the recommendations of the 2011 Facilities Master Plan, as modified by the 2013 Facilities Master Plan Update.

PROJECT LIST

- COMPLETED PROJECTS
  / Cul-de-sacs, Perimeter Wall, and Parking Lot 12 Extension (completed in 2013)
  / College Avenue Improvements (completed in 2013)
  / Soccer Field Construction (completed in 2013)

- PROJECTS IN DESIGN AND UNDER CONSTRUCTION:
  / Stadium Improvements
  / Campus Entry and Edge Improvements
  / Parking Lot 11 Extension
  / Dunlap Hall Renovation
  / Tessmann Planetarium Renovation
  / Central Plant + Infrastructure Replacement + Campus Mall Improvements
  / South Campus Circulation Improvements

- PROJECTS IN PLANNING:
  / Science, Technology, Engineering, + Mathematics (STEM) Building
  / Health Science Building
  / Campus Quadrangle
  / Entry Court Improvements
  / Johnson Center Renovation
  / Fine + Performing Arts Complex
  / Student Services + Instructional Building
  / Administration Building Renovation
  / Learning Resources Center Replacement
  / Vocational Technology Building
  / Parking Structure
  / Interdisciplinary Instructional Building
  / Middle College High School
  / Swimming Pool Replacement
  / Parking Lot 6 + 7 Improvements
  / On-going Schedule Maintenance + Efficiency Improvements
  / On-going Campus-wide Accessibility Improvements
2013 SANTA ANA COLLEGE FACILITIES MASTER PLAN UPDATE
The Centennial Education Center, a state-approved off-campus center, opened in 1980 on a site that is part of Centennial Regional Park and leased from the City of Santa Ana. The term of the lease ends in October 2013. The Centennial Education Center houses much of the Santa Ana College School of Continuing Education, as well as a district-administered child development center.

**ADDRESS:**
2900 W Edinger Ave
Santa Ana, CA 92704

**YEAR OPENED:**
1980

**CAMPUSS AREA:**
leased portion of Centennial Regional Park

**BUILT AREA:**
47,214 OGSF

**BUILT ASSIGNABLE AREA:**
39,474 SF

*Source: California Community Colleges Chancellor’s Office (CCCCO) Facility Utilization Space Inventory Option Net, SAC 2012 Space Inventory*
Centennial Regional Park is situated on the coastal plain east of and adjacent to the Santa Ana River channel. The Centennial Education Center was developed within the park and is 2.58 miles from the main Santa Ana College campus. Prior to the development of the park, the land was conveyed to the City of Santa Ana by the federal government with conditions governing its use. In recent years the US Department of Interiors has disputed the use of the Centennial Education Center site for educational purposes, and its position has placed the renewal of the lease in question.

The site is relatively far from State Route 55 and Interstate Highway 405, the nearest freeways. It is served by West Edinger Avenue and South Fairview Street, which intersect at the northeast corner of the park. Vehicular entries into the park from both roads connect to Centennial Park Drive, an internal loop that is the main route within the park and that provides access to the Centennial Education Center site. The river channel also provides a link between the park and the community via the Santa Ana River Bike Trail.

The graphic on the opposing page illustrates the neighboring land uses, which include the parkland that surrounds the Centennial Education Center, Santa Ana Unified School District’s Godinez Fundamental High School, and the surrounding residential neighborhoods.

OBSERVATIONS

• The Centennial Education Center is located within the community that it serves.

• The amenities at Centennial Regional Park bring the community to the Centennial Education Center and provide it with a beautiful setting.

• Good access to the Centennial Education Center is provided via major roads, public bus lines (Orange County Transit Authority) and bikeways.

• The proximity to Godinez Fundamental High School has been a positive attribute of this location. The School of Continuing Education rents space at the high school for classes after school hours.

• Renewal of the lease of the land on which the Centennial Education Center sits is in question.
NEIGHBORHOOD CONTEXT

DISTRICT CAMPUS

RESIDENTIAL ZONE

COMMERCIAL ZONE

SCHOOLS

PARKS

CENTENNIAL EDUCATION CENTER

JACKSON ELEMENTARY SCHOOL

WINDSOR PARK

CENTENNIAL REGIONAL PARK

GODINEZ FUNDAMENTAL HIGH SCHOOL
The Centennial Education Center is near the northern park entry from West Endinger Avenue and adjacent to two parking lots. Another parking lot to the west of the park entrance provides overflow parking capacity when needed. Many students ride bicycles to the Centennial Education Center and bike racks are available next to the covered patio.

The Centennial Education Center is comprised of single-story groups of temporary buildings, most of which date to the establishment of the Center in 1980. These buildings are certified by the state as school facilities. The site is fenced and secured after business hours. The child development center has a separate entrance from the parking lot. It is fenced and separated from the rest of the Centennial Education Center. A service driveway provides access to a small receiving yard on the south side of the center.

The Child Development Center is used when space for outdoor events is needed. Informal gatherings are held to the west of the Centennial Education Center in the plaza next to the park’s lake. A small covered patio with vending machines and tables is located in the courtyard between Buildings A, B, E, and F.

**OBSERVATIONS**

- The “small village” scale is appropriate and welcoming.
- The temporary buildings are aging and require more resources to maintain.
- Ample parking is available, however, the parking lots, which are the responsibility of the city, are not well maintained.
- Although the Centennial Education Center is well-known to the community, it is not very visible from the public streets. Better signage on W. Edinger Avenue and S. Fairview Street would be desirable.
Buildings A, B, E, and F house the offices and instructional space of the School of Continuing Education, including administration and student services offices. The largest portion of students is enrolled in English as a Second Language (ESL) courses. Other courses include adult basic education, high school completion, parent training, and vocational training. Buildings C and D house the Child Development Center.

**OBSERVATIONS**

- The zoning of functions works well, clustering related functions together and providing separate zones and access points for the School of Continuing Education and the Child Development Center.
The future of the Centennial Education Center depends on the RSCCD’s success in securing the future use of this site. The location, site, and facilities have supported the Center’s mission by providing a welcoming place to learn in a location that is green, beautiful, well-known, and accessible to the community that it serves. The existing facilities are temporary and were constructed over thirty years ago.

Until 2010, the Santa Ana College School of Continuing Education operated the Marketplace Education Center, which closed due to the loss of its lease. The School of Continuing Education provides instruction at many other sites throughout the community and the management of its widely distributed operations has been a logistical challenge.

Planning for the Centennial Education Center should be part of the larger discussion about the future of Santa Ana College’s School of Continuing Education. It is recommended that the future growth and instructional focuses of the School of Continuing Education be determined in Santa Ana College’s next educational master plan. These determinations must take place before any facilities discussions, in order to frame the exploration of options for instructional facilities.

The cost of, and the potential to continue to lease, the current site should be weighed against options to lease or purchase other sites. The location of this and other potential sites should be assessed by their degree of accessibility to the student populations that will be served. Given the pace of development and the increasing scarcity of appropriate sites in Orange County, it should be a priority to secure long-term solutions.
The Digital Media Center opened in 2005 and was built through a partnership among Santa Ana College, the City of Santa Ana, and the federal government. The land was donated by the city and the zoning of the site and of the adjacent properties on Bristol Street was changed to commercial use. The funds to develop the facilities came from the RSCCD Measure E Bond, the City of Santa Ana, and the US Department of Commerce through a community development block grant.

The Digital Media Center houses a groundbreaking technology business incubator; instructional space for the digital media arts, digital music postproduction, and TV/video production; and the college’s Public Service Institute, which offers seminars to employees of public agencies.

ADDRESS: 1300 S. Bristol Santa Ana, CA 92704
YEAR OPENED: 2005
CAMPUS AREA: 1.4 acres
BUILT AREA: 28,200 OGSF
BUILT ASSIGNABLE AREA: 11,228 ASF

Source: California Community Colleges Chancellor’s Office (CCCCO) Facility Utilization Space Inventory Option Net, SAC 2012 Space Inventory
The Digital Media Center is situated on the west side of South Bristol Street, where the city has implemented a street improvement plan that will eventually extend northward to Santa Ana College’s main campus. The plan is intended to improve Bristol Street’s function as an important north-south transportation route and commercial corridor. The Digital Media Center is about two miles from the main campus and linked by a direct Orange County Transit Authority bus route. The nearest major cross street, West Edinger Avenue provides a direct route to the Centennial Education Center. The Digital Media Center is also near the Orange County Civic Center, the Santa Ana Empowerment Zone, and the downtown Santa Ana Artists Village.

The graphic on the opposing page illustrates the neighboring land uses, which include commercial zones and middle to lower income residential neighborhoods. Mater Dei High School is located at the intersection of West Edinger Avenue and South Bristol Street. A city-owned parking lot across South Bristol Street provides additional parking for the Digital Media Center and its neighbors.

**OBSERVATIONS**

- The Digital Media Center is very visible to the community.
- A 1-acre city-owned empty lot lies to the north of the Digital Media Center and may present an opportunity for expansion.
- Security is an issue in this urban neighborhood. A video surveillance system has been installed recently as part of a district-wide project.
- Although the Digital Media Center is not far from the main campus, there is an ongoing need to publicize its existence to students.
The Digital Media Center was designed to the aesthetic standards of a high-quality professional building. The 1.4-acre flat and unfenced site is fully occupied by the two-story building and the 66-stall parking lot. The Digital Media Center is certified by the state as a school facility and is owned by RSCCD.

RSCCD has been addressing issues that date back to the construction of the facility, including the HVAC control system, water-infiltration, and flooring adhesion. The most challenging issue has been a portion of the second floor that is noticeably out-of-level and, although structurally sound, would be costly to repair.

**EXISTING SITE + FACILITIES**

**DIGITAL MEDIA CENTER**

**OBSERVATIONS**

- Vehicular circulation and access to the site works well.
- The existing parking lot is often filled to capacity. Seminars offered by the Public Service Institute bring significant numbers of cars to the parking lot.
- The site lacks outdoor gathering and event space.
- Despite several challenging issues, the facilities are fairly new and in good condition.
The Digital Media Center houses office and instructional space. The digital media arts courses that are offered by the Division of Fine and Performing Arts, are taught in state-of-the-art classrooms and labs. Instructional spaces include the TV/video production studio and media and business-related labs and classrooms equipped to train students for real world applications. These facilities were also designed to be rented to businesses and generate revenue for the College when they are not being used for instruction. The TV/video production studio moved to the Digital Media Center from temporary facilities at the Centennial Education Center.

In addition to the digital media arts instructional programs, the Santa Ana College Business Division offers 8- to 16-hour seminars at the Digital Media Center through its Public Service Institute. These seminars are geared toward employees of public agencies and draw attendees from across the region. The seminars are held in the classrooms and meeting rooms.

The business incubator offers space for technology start-ups, as well as services ranging from basic business consulting to marketing/advertising, human resources, accounting, web and promotional design, and access to venture capital. The incubator can accommodate up to twelve start-ups and is located on the second floor. The facility includes individual offices for each start-up and a shared reception area, conference room, and break room. The twenty-year federal grant commitment that funds the operation of the business incubator will be in effect until 2025.

**OBSERVATIONS**

- The business incubator and instructional programs have both been successful and their spaces are fully utilized.
- Both functions have benefitted from synergies in their relationship.
- The instructional labs and equipment must be kept up-to-date to maintain their value to the College and community.
- More storage space is needed for TV/video sets, large equipment, and other items currently stored at the Centennial Education Center.
- The business incubator space may become available for other uses after the grant expires in 2025.
FIRST FLOOR:
/ Administrative office
/ Classrooms
/ Digital media labs
/ Faculty workspace
/ Meeting space

SECOND FLOOR:
/ Digital media classrooms
/ Information technology services
/ Business incubator
/ Meeting space
The Digital Media Center was created through a partnership with the community that allowed the partners to pool their resources and meet several needs. The business incubator needed a new home, Santa Ana College needed permanent space for the digital media labs, and the City of Santa Ana needed landowners that would contribute to the economic revitalization of the Bristol Street Corridor. The occupants have taken advantage of their common location to create synergistic relationships. All of the programs have been successful and have grown since the Digital Media Center opened and this growth has brought about the need for more parking capacity, storage space, and indoor and outdoor event space. The city-owned lot to the north of the Digital Media Center, across Wilshire Street, may provide an opportunity for expansion.

It is vital that the digital media arts labs and equipment be kept current with industry standards. The funds to do this must be actively sought. The intention to rent the digital media arts labs and studios to businesses has not been fulfilled to a significant degree although overtures from the business community have been entertained. It is recommended that partnerships with media businesses be pursued for the purpose of generating revenue and to provide students and faculty with the benefits of contact with the regional media business community.

The opportunity to expand the Digital Media Center campus and facilities may arise in the future. It is recommended that the option to acquire and develop the city-owned lot to the north of the Digital Media Center be considered.

The long-term plan for the Digital Media Center must examine options for the use of the business incubator once the grant funding expires in 2025. It is recommended that the space be considered for college instructional use in order to help meet the future needs.

The future use of the Digital Media Center facilities and any decision to expand its campus must be guided by the College’s educational master plan and discussions about the opportunities and constraints surrounding the use of this site. The opportunity to expand the Digital Media Center must be balanced with the need to fully develop the main campus and other education center sites. The decision to place programs in this location must be based on a solid rationale that overrides the disadvantages of bringing students to a separate site. The Digital Media Center’s high profile and accessible location in the community would be key considerations in this regard.
Since 1970 Santa Ana College has been affiliated with the Orange County Sheriff’s Department to provide law enforcement training. On September 11, 2005 the Orange County Sheriff’s Regional Training Academy opened in the Tustin Legacy District, the former Marine Corp Air Station Tustin. When this military base closed and plans were made for its redevelopment, RSCCD applied for and was granted a 15-acre site in the Tustin Legacy Education Village. The property was donated to RSCCD by the City of Tustin through a public benefit conveyance. The funds used to develop the facilities came from the RSCCD Measure E local bond. The Academy was the first to open in the Tustin Legacy Education Village.

The facility houses both the Santa Ana College Criminal Justice Academies and Orange County Sheriff offices and training space. Use of the instructional and meeting spaces is shared. Santa Ana College offers lectures and applied practice courses to students enrolled in the sheriff’s basic training academies – an intense, three-level instructional sequence for cadets training for careers in law enforcement. Each day cadets gather at a point near the campus and enter it in formation. They remain there all day, undergoing rigorous training as a close cohort. Cadets do not leave the Academy until the end of the day when they drive off, once again in formation. In addition to the basic training academies, weekend and evening training is offered for existing law enforcement officers.

ADDRESS: 15991 Armstrong Avenue
Tustin CA 92782

YEAR OPENED: 2005

CAMPUS AREA: 10 acres

BUILT AREA: 53,000 OGSF

BUILT ASSIGNABLE AREA: 8,116 ASF

Source: California Community Colleges Chancellor’s Office (CCCCO) Facility Utilization Space Inventory Option Net, SAC 2012 Space Inventory
NEIGHBORHOOD CONTEXT

The Orange County Sheriff’s Regional Training Academy is built on part of the land that was once the Marine Corp Air Station Tustin. The opposing graphic shows the 15-acre academy site that is owned by RSCCD. The Academy occupies ten acres with the remaining five acres as yet undeveloped. The Tustin Legacy Education Village is a work in progress and the land surrounding the Academy has been cleared, but not yet developed.

The graphic on the opposing page indicates the neighboring land owners, including the South Orange County Community College District (SOCCCD), which is in the process of building the Advanced Technology and Education Park (ATEP). It will be the Academy’s nearest neighbor. Warner Avenue will be extended in the future and will become the southwestern edge of the Academy’s campus. Commercial uses are planned for the land across Warner Avenue. A regional park and a mixed-use community core are planned for the area across Armstrong Avenue.

Currently, the Academy site is exposed to the elements, especially heat and wind-blown dust from stockpiles of material gathered during the demolition of the former base. Conditions will likely improve with the development of the surrounding properties.

OBSERVATIONS

- A use must be found for the 5-acre undeveloped portion of the RSCCD property.
- The South Orange County Community College District is a potential partner.
- The plans to develop the Tustin Legacy District will place the Academy in the center of a vibrant and visible part of the community.
The fenced and secured site consists of the single-story main building and adjacent courtyards, several small support buildings, outdoor training yards and courses, and a 357-stall parking lot. Last year a portion of the parking lot was repurposed for the installation of the Orange County Peace Officer Memorial. The Academy is certified by the state as a school facility.

The outdoor training areas include a tactical training course, obstacle course, sand pit exercise area, turf exercise area, running track, and vehicle storage yard.

The site is accessed from Armstrong Avenue through two driveways that are secured with motorized gates. The main building entrance faces the parking lot. From Armstrong Avenue the building can be entered through a ramped pedestrian walkway and a public entrance to the sheriff’s office.

A 10-foot wide water utility easement and high pressure water pipe passes through the property near the northwest property line.

**OBSERVATIONS**

- Site access and vehicular circulation works well and the parking capacity is adequate.

- With the exception of a few issues, the site and facilities are relatively new and in good condition.

- The facilities are heavily used and require frequent maintenance. It has been a challenge to obtain adequate resources for the maintenance of both the building and grounds.
Space in the main building is shared between Santa Ana College and the Orange County Sheriff’s Department. The building features a main hall that serves as the circulation spine and houses the guidons and other mementos of each class of academy cadets. The auxiliary classroom is a flexible gym and multipurpose space that seats 1500. Cadets are required to bring their lunches, which they eat here and in the adjacent shaded patio. Other outdoor courtyards and patios are integrated into the building plan, including the large assembly plaza. Classrooms, locker rooms, and administrative and staff offices are provided. The building does not contain faculty office space for the full-time instructor and the adjunct faculty.

The Sheriff maintains administrative and training offices, a video production office, and the Community Services Office, which coordinates with community volunteers, the reserve service, and the Police Explorers.

**OBSERVATIONS**

- The sharing of space between Santa Ana College and the Orange County Sheriff’s Department has benefited both entities.

**OC SHERIFF**
- Administrative office
- Tactical Office
- Arrest and Control Training (ACT) Office
- Video Production Office
- Community Services Office

**SANTA ANA COLLEGE BASIC ACADEMY**
- Administrative office and staff offices
- Four classrooms
- Auxiliary Classroom/Gym/Multi-purpose Room
- Shower/lockers
- Main hall

**OUTDOOR AREAS**
- Patio with shade structure
- Plaza
- Training areas
  - Obstacle and tactical training course
  - Sand pit exercise area
  - Turf exercise area
  - Running track
- Vehicle storage yard
The Orange County Sheriff’s Regional Training Academy is the result of a long and successful collaboration between Santa Ana College and the Orange County Sheriff’s Department. Its future success is dependent on the continuation of this partnership. Although the Academy is a seven-mile drive from the main campus, it is a relatively self-contained part of the College. The campus facilities are well designed for the functions that they house. The Tustin Legacy Education Village promises to be a vibrant community context once it is fully realized.

The Academy’s campus will be ten-years-old when Santa Ana College celebrates its centennial in 2015. Adequate resources must be allocated to its upkeep in order to preserve its value.

It is recommended that the remaining 5-acre portion of the property be developed or exchanged for property that can be of greater value to RSCCD.
Santa Ana College’s Fire Technology Department’s Basic Fire Academy is the first regional fire academy in the state to be accredited by the State Board of Fire Services and the State Fire Marshal. The Academy is administered under the guidance of the Orange County Fire Chiefs’ Association. Candidates for this program must pass rigorous physical requirements and have obtained prerequisite certificates. Students are required to take general education classes, as well as the fire technology core classes. Classes are taught at Santa Ana College’s main campus where the department office is located.

Santa Ana College operates fire technology training centers at off-campus sites to conduct hands-on training with equipment and environments that simulate real world conditions. RSCCD leases two sites and has built and owns the training facilities that are housed at each location.

**TRAINING CENTER SITES**

- Joint Powers Training Center  
  18301 Gothard Street, Huntington Beach CA 92648
- North Net Training Center  
  2400 Orangewood Avenue, Anaheim CA 92806
RECOMMENDATIONS

Fire technology training requires a sizable land area and a neighborhood context that is appropriate for proximity to the training activities. Students may be required to travel between the training centers and the main campus of Santa Ana College, where the departmental office is housed and lectures are given. Until recently Santa Ana College operated a third fire technology training center at Centennial Regional Park, but the site became unavailable. Other training sites have been leased in the past. It should also be noted that RSCCD had intended to build a training center on the same property that contains the Orange County Sheriff’s Regional Training Academy in Tustin Legacy. The site was deemed to be too small to house both functions.

It is recommended that the future growth of the fire technology program be determined in Santa Ana College’s next educational master plan in order to frame the exploration of options for training space. The cost of, and the potential to continue to lease, the current sites should be weighed against options to lease or purchase other sites. Given the pace of development and the increasing scarcity of appropriate sites in Orange County, it should be a priority to secure a long-term solution within a reasonable distance from the main campus.
RSCCD Goal 1
RSCCD will assess the educational needs of the communities served by RSCCD and will adjust instructional programs, offerings, and support services and will allocate resources as needed to optimize the alignment of students’ needs with services and fiscal resources.

RSCCD Goal 2
RSCCD will assess the educational needs of the communities served by RSCCD and then pursue partnerships with educational institutions, public agencies, non-profit organizations, and business/industry/labor to collaboratively meet those needs.

RSCCD Goal 3
RSCCD will annually improve the rates of course completion and completion of requirements for transfer, degrees, certificates, and diplomas.

RSCCD Goal 4
RSCCD will support innovations and initiatives that result in quantifiable improvement in student access, preparedness, and success.

RSCCD Goal 5
RSCCD will use a cycle of integrated planning that will demonstrate the effective use of resources.
PRESIDENT’S MESSAGE

OVERVIEW OF THE EDUCATIONAL MASTER PLAN

FACILITIES
  / Main Campus
  / Orange Education Center
Dear Santiago Canyon College Community and Friends,

As President of Santiago Canyon College (SCC) since 2002, it has been my pleasure to work in partnership with the dedicated faculty, staff, and administrators here at the institution. During these past few years, we have faced some very trying economic times. Even with a shrinking budget, SCC and its many campus constituents have been able to meet economic, curricula, technological, and physical plant challenges all while prioritizing our students’ educational experience and maintaining critical pathways to student achievement and success.

In addition to receiving the six-year affirmation of accreditation from the Accrediting Commission for Community and Junior Colleges (ACCJC), following the self-study process and site visit in 2008, SCC is proud of the many accomplishments achieved over the past five years, 2007–2012.

The following are some highlights of those accomplishments:

**CONTINUING EDUCATION**
- Orange Education Center application is approved as an authorized education center by both the California Board of Governors and the California Postsecondary Education Commission, qualifying for receipt of $1,000,000 per year in ongoing state funding
- Division of Continuing Education receives two separate CASAS 2011 Promising Practices awards from the California Department of Education
- OEC faculty receive two awards at the Association for Community and Continuing Education Conference, 2011

**FACILITIES**
- Groundbreaking for Science Center, March 2008 – Dedication June 2010
- Grand Opening of the Softball Field Complex, January 2009
- Completion of a new parking lot with 1000 additional spaces
- SCC becomes a smoke-free campus, 2009
ATHLETICS
• Women’s Soccer wins the State Championship and is crowned National Champions, 2009
• Golf team member Connor Covington becomes the first SCC golfer to win state championship, 2009
• Women’s Soccer team wins the State Academic Scholars Award, 2010

GRANTS
• $100,000 VTEA Tech Prep Demonstration Site Grant to develop a “high school to college” pathway
• $750,000 grant from Next Generation Learning Challenges for Open General Education Curriculum at Multi-Institutional Scale
• Two-year CTE California Chancellor’s Office Faculty Development Grant is completed
• Five-year $3.23 million Title V Hispanic-Serving Institutions federal grant to support student learning outcomes assessment and increase student success in science, technology, engineering and math (STEM)
• $623,000 in first year of five-year (STEM)2 grant in partnership with California State University, Fullerton (CSUF)
• $2.1 million awarded in federal funding to CAMP (College Assistance Migrant Program) for a second five-year cycle
• $154,212 Teacher Pathway Partnership from CSUF for at-risk students

STUDENT SERVICES
• Admissions and Records implements the use of social media tools, fall 2010
• “Discover SCC: Orientation to College Life” launches
• Financial Aid Electronic Book Voucher system is introduced
• Received approval for independent veterans program, 2012

ACADEMIC AFFAIRS
• SCC Collegiate Choir performs at world-famous Carnegie Hall in New York City, 2008
• Team of four SCC students achieve worldwide notice by finishing in top 15 of the Microsoft Imagine Cup Embedded Development programming challenge, 2011
• CurricUNET is implemented by SCC
• STAR Center (Science Teaching and Resource Center) opened, 2011

The newest iteration of the Educational Master Plan 2012–2016 serves a similar purpose as previous plans but in a completely different format. While past plans were compilations of individual division, department, program, and discipline plans, which aimed to identify goals, objectives, and future needs of each area, the current plan, presented in the document to follow, is a more deliberate and cohesive document designed to illustrate a more comprehensive perspective on institutional goals for the next four years. The result is a roadmap designed to increase student success, improve efficiency, demonstrate accountability, and enhance institutional effectiveness.

While California’s current economic climate remains uncertain, I am confident that for our students the future holds many wonderful opportunities to be seized upon. Faculty, staff and administrators alike are dedicated to providing a solid educational foundation for SCC students and are committed to fostering a culture dedicated to personal growth through innovative, student-centered educational programs and services.

I am honored to be a part of this vibrant college community, and will continue to be an advocate for the students and the community it serves.
OVERVIEW OF THE EDUCATIONAL MASTER PLAN

Planning at Santiago Canyon College (SCC) exists in a variety of interconnected processes and documents. In SCC’s culture, the term “Educational Master Planning” refers to three interrelated and dynamic documents:

- **Department Planning Portfolios (DPPs):** Departments and units annually review progress and set goals.

- **Program Reviews:** Every three years, departments and units take a more comprehensive look back and then engage in a multi-year goal-setting process that provides in-depth discussions, introspection, quantitative analyses, and evaluation. This document is the central link between the RSCCD and college goals, accreditation feedback, and department plans.

- **Educational Master Plan (EMP):** The multi-year EMP is the primary campus-wide planning document and contains the overview planning piece—those elements that have broad implications for the college as a whole, that bridge more than one department or unit, or that reside apart from the units as currently configured.

The Santiago Canyon College Educational Master Plan 2012–2016 was developed in an environment almost completely opposite that of the previous 2007–2012 Educational Master Plan which contained plans that were developed at a time when Santiago Canyon College was one of the fastest growing community colleges in the nation, and when a period of sustained growth and funding was envisioned. The 2012–2016 Educational Master Plan was developed during an economic recession that challenged the College to respond to a series of state funding cuts that resulted in the contraction of the College and some of its programs.

To help inform the planning process for the Educational Master Plan, Santiago Canyon College conducted an Institutional Scan consisting of both an Environmental Scan and an Internal Scan. Data from a variety of sources were gathered and synthesized in ways that revealed upcoming challenges to operations and provoked thoughtful discussion about the future direction of the College. These data influenced the College’s strategic direction.

Recognizing that the conditions present during the development of the EMP could change quickly in unforeseen ways, the EMP was developed to allow for flexibility and adjustment to the college’s goals.
The 2012–2016 Educational Master Plan is focused around four fundamental questions about the College:

1. **Whom does Santiago Canyon College serve?**
2. **Whom will Santiago Canyon College serve in the future?**
3. **What programs and courses does Santiago Canyon College offer now?**
4. **What programs and courses should Santiago Canyon College offer in the future?**

The synthesis of the information and data gathered and analyzed in the development of the Educational Master Plan provided for the development of fifteen goals and action items that focus SCC priorities in the following areas:

- Strengthening outreach and recruitment
- Aligning the college curriculum to focus on completion of pathways
- Promoting an integrated approach to supporting student success
- Promoting a college identity of high quality, academic excellence, and personalized instruction
- Supporting faculty in offering high quality instruction to students in the classroom and online
- Maintaining and enhancing the college’s technological infrastructure
- Maintaining the facilities infrastructure
- Supporting focused green practices on campus
- Supporting an infrastructure related to web and social media
- Supporting faculty development in innovative pedagogies and curriculum design
- Increasing educational goal completion
- Increasing student learning and achievement
- Strengthening relationships with key partners and stakeholders
- Developing sustainable alternative revenue streams
- Strengthening capacity to seek and acquire grant funding

The details of Santiago Canyon College’s 2012–2016 Educational Master Plan can be found in the college website at:

Santiago Canyon College (SCC) was established to serve the growing communities within RSCCD. As central Orange County filled up, development shifted southward and eastward, into the canyons and foothills of the Santa Ana Mountains. RSCCD purchased 30 acres of land in Santiago Canyon from the Irvine Company. In 1985 the Orange Campus of Rancho Santiago College opened its doors to 2,500 students. The campus consisted of a few buildings situated in the rugged canyon country with few residential and commercial neighbors.

The State Route 241 Foothill and 261 Eastern Toll Roads were built soon after, followed by major arterial streets that link the campus to Irvine, Tustin, Anaheim Hills, and Interstate Highway 5 and State Route 91. New communities have been built throughout the area. Plans for more development to the east of the campus will place it fully within a suburban context. In 1996 the Board of Trustees voted to become a multi-college district and in 2000 Santiago Canyon College achieved full accreditation.
The 2002 passage of the RSCCD Measure E local bond by the voters of RSCCD provided funds to build new facilities for both colleges. Many new buildings and athletic instructional facilities have been added to the Santiago Canyon College campus. Through the donation and purchase of land, the Santiago Canyon College main campus has grown to 82 acres—the entire area encompassed by East Chapman Avenue, Jamboree Road, East Santiago Canyon Road, and Newport Boulevard. In addition to the main campus, the Orange Education Center opened its doors in 2005 to provide instruction through the School of Continuing Education.

The graphic on the opposing page shows the locations of Santiago Canyon College’s main campus and the Orange Education Center.

INSTRUCTIONAL SITES
• Main campus, est. 1985
• Orange Education Center, est. 2005

SPACE INVENTORY
• Overall gross built area: 356,277 OGSF
• Built assignable area: 252,220 ASF

Source: California Community College Chancellor’s Office (CCCCO) Facility Utilization Inventory Option Net, SCC 2012 Space Inventory
True to its name, the main campus of Santiago Canyon College is ensconced in a rugged and scenic canyon that slices across the foothills of the Santa Ana Mountains. The campus has grown from 30 acres to 82 acres. All of the roads that encompass the campus—East Chapman Avenue, Jamboree Road, East Santiago Canyon Road, and Newport Boulevard—are major links to the surrounding community, bringing students from a wide area of Orange, Riverside, and San Bernardino Counties. Over the first 15 years of its existence, rapid growth in enrollment led to an acute need for permanent space that outstripped the pace of campus development.

Over the past decade the campus has undergone a dramatic physical transformation. The building inventory has grown to 271,138 gross square feet and continues to grow with the recent completion of the Humanities Building, Gymnasium, Swimming Pool, and Maintenance and Operations facility. The campus site has been improved with regard to parking and circulation and athletic instructional facilities. Sustainability and the teaching of environmental awareness is a college priority as demonstrated by the Coastkeeper Garden.

The next few pages describe the 2011 Facilities Master Plan, which was created to ensure that future campus development aligns with the College’s academic vision and goals and is guided by a solid set of facilities planning principles.
The 2011 Facilities Master Plan was created through a highly participatory process, to serve as a guide for future campus development. It describes the College’s strategy to develop facilities that will support the goals and objectives of the 2007–2012 Educational Master Plan and address the projected future growth in enrollment. The Facility Master Plan positions the College to maximize funding opportunities and look for partners within the community. [http://sccollege.edu/About/Documents/SCC%20Facilities%20Master%20Plan.pdf](http://sccollege.edu/About/Documents/SCC%20Facilities%20Master%20Plan.pdf)

**PLANNING CHALLENGES**

In 2010 and 2011, the Facilities Committee—representing faculty, classified staff, students and administrators—participated in a series of interactive meetings to review information and evaluate options. One of the initial responsibilities of the committee was to review the analysis of existing conditions, challenges, and opportunities, which are summarized below.

- Projects currently in planning and construction need to be completed.
- Many temporary classrooms and labs are in use.
- Plans are needed to address the secondary effects of the construction of new buildings.
- Buildings built in the 1980s and 1990s need to be modernized in the next decade.
- The campus is built on a hillside and pedestrian circulation between facilities can be challenging.
- The oldest buildings are at the center of the campus, occupying the space between the newer buildings that will surround them.
- Clear entry paths to the campus core from the surrounding parking lots are needed.
- Outdoor gathering spaces are small and scattered.
- The climate in the foothills can be harsher than on the coastal plain. The Santa Ana winds strongly impact the campus.
- The campus can become more energy efficient.
PLANNING SOLUTIONS
The 2011 Facilities Master Plan recommends a list of facilities and site improvement projects, as well as a phased and logical sequence of development. The projects are intended to do the following.

• Renovate existing buildings to extend their usefulness and address secondary effects.
• Welcome students into the campus core by creating clear entry points from parking lots.
• Knit the expanded campus together by revitalizing the campus core around a new quad and creating an organizing framework of pedestrian links that traverse the changes in topography.
• Design the campus to be environmentally sustainable. Provide campus-wide space cooling with a central plant.
• Improve the campus environment by creating shady and screened open spaces for studying, gathering, dining, and informal recreation.
This list of facilities and site improvement projects are recommended in the 2011 Facilities Master Plan.

**PROJECT LIST**

- **COMPLETED PROJECTS:**
  - Science Building (completed in 2010)
  - Maintenance and Operations (completed 2012)
  - Gymnasium (completed 2012)
  - Swimming Pool (completed 2012)
  - Humanities Building (completed 2013)

- **PROJECTS IN PLANNING:**
  - Fine + Performing Arts
  - Student Services Building
  - Entry Court
  - Building D Renovation
  - Observatory
  - Student Center + Instructional Building
  - Building E Renovation
  - Instructional Building
  - Child Development Center Renovation
  - Central Quadrangle
  - Baseball Field
  - Track + Grandstands
2011 SANTIAGO CANYON COLLEGE FACILITIES MASTER PLAN
The Orange Education Center, a state-approved off-campus center, opened in 2005. Previously an industrial facility, this site was remodeled to house the Santiago Canyon College School of Continuing Education, a child development center, and the RSCCD Warehouse and Publishing Center.

ADDRESS: 1465 North Batavia Street Orange CA 92867
YEAR OPENED: 2005
CAMPUS AREA: 6.34 acres
BUILT AREA: 85,139 OGSF
BUILT ASSIGNABLE AREA: 58,180 ASF

Source: California Community College Chancellor's Office (CCCCO) Facility Utilization Inventory Option Net, SCC 2012 Space Inventory
The Orange Education Center is located in the commercial and industrial sector of the City of Orange, on the flat coastal plain near the mouth of Santa Ana Canyon. It is 5.6 miles from the main Santiago Canyon College campus and more central to the population centers of the district. The Santa Ana River channel runs nearby and to the west of the site. The Orange Education Center is located on North Batavia Street, a secondary street, located among neighboring properties that are zoned for industrial use. North Batavia Street connects with West Taft Avenue and West Katella Avenue, which is a main arterial street and commercial corridor. This stretch of West Katella Avenue links the neighborhood to the state route 55 freeway to the east and the state route 57 freeway to the west. The nearest Orange County Transit Authority bus lines stop on W. Katella Avenue and West Taft Avenue.

Most of the neighbors on both sides of North Batavia Street are industrial concerns. The property to the north of the Orange Education Center is a Southern Pacific Railroad right-of-way. Farther north is a Southern California Edison easement that houses high voltage electrical transmission lines. A drainage channel borders the rear of the Orange Education Center property.

**OBSERVATIONS**

- The Orange Education Center’s location on North Batavia Street is not very visible to the community, but it is in a location that is central to the community and easily accessed by car, bus, and bicycle.

- Bus stops and neighborhood restaurants and stores are within walking distance, but not adjacent to the site.

- The proximity to the mouth of the Santa Ana Canyon exposes the Orange Education Center to seasonal strong Santa Ana winds that blow into the site from the east-northeast.

- Although climate conditions are comfortable for much of the year, the Santa Ana winds, along with the urban heat island effect, can create hot and sometimes windy conditions.
There are three vehicular entrances from North Batavia Street. The main entrance is near the southwest edge of the campus and is provided with clear signage. The other entrances are north of the building and less visible due to proximity to the railroad tracks and signage that is small and partially obscured. A short driveway leads directly from North Batavia Street to the loading dock of the RSCCD warehouse. A driveway/fire access lane provides access to all sides of the building and the parking areas. The Orange Education Center Child Development Center serves the community, as well as students, and contributes to the vehicular traffic entering the site.

Pedestrians enter the campus mainly at the north and southwest corners of the campus. Many park on West Trenton Avenue and cross North Batavia Street to reach the campus. A formal pedestrian gateway from the street is provided directly in front of the west building entrance. Bike racks are provided in two locations. The graphic on the opposing page shows outdoor student gathering areas, including a partially shaded patio next to a food truck parking space.

**OBSERVATIONS**

- The parking capacity is not adequate to serve the Orange Education Center’s needs.
- The flow of traffic at the main southwestern entry is problematic as it becomes gridlocked with pedestrians and cars.
- The placement of the RSCCD warehouse loading dock creates a dead end in the vehicular circulation at the front of the site, which contributes to the gridlock due to cars that back up and turn around to exit.
- Many students are dropped off near the western building entrance, which also contributes to the gridlock.
- The fire access lane is constricted where diagonal parking stalls were recently added along the north edge of the building.
- The main pedestrian campus gateway along North Batavia Street is often mistaken for a vehicular driveway, necessitating the use of orange traffic cones to discourage drivers.
- Parking and vehicular circulation leave little outdoor space for student gatherings. Most of the outdoor spaces are located on the south side of the building and additional shade at the food truck patio would be beneficial.
- Students use the bike racks at the south side of the campus. The racks at the rear of the site are not bolted down.
- Students jaywalk across North Batavia Street when they park on West Trenton Avenue and walk to the Orange Education Center.
- The pedestrian path on the North Batavia Street sidewalk is not accessible where it crosses the railroad tracks.
The 6.34-acre site is fenced and securable. The site consists of one building, several courtyards adjacent to the building, and parking lots and driveways. The northwestern portion of the site lies within the railroad easement and is used for parking. A walled play yard for the Child Development Center is located on the east side of the building.

Orange Education Center is housed in an 85,139 gross square foot single-story building that has been repurposed from its original industrial use. The space between three buildings on the property was infilled to create a single building. The building and site improvements are in acceptable condition, although issues have developed with several building systems. These include the HVAC and security access control systems. The interior finishes have held up well under heavy use, but routine repairs, maintenance, and refinishing of the building exterior are needed. The facility is impacted by warm weather and the Santa Ana winds that clog parking lot and roof drains with debris. Failure of the air conditioning system is also frequently experienced during hot weather.

Three shipping containers at the rear of the site are needed for additional storage space.

**Observations**

- Additional permanent storage is needed.
- The Orange Education Center has been doing more to operate sustainably.
- Regular maintenance is needed to maintain the condition of this heavily used facility.
The main components of the Orange Education Center are the Santiago Canyon College School of Continuing Education, the RSCCD Warehouse and Publishing Center, meeting space, and a district-administered child development center.

The graphic on the opposing page illustrates the School of Continuing Education spaces for administration, instruction, library/learning resources, and student services and activities.
Although its location is not highly visible, the Orange Education Center has been well attended from its opening day. The Orange Education Center’s central location provides convenient access to the functions that it houses. The Orange Education Center’s success has resulted in the need for more parking capacity. The facilities were purchased and repurposed in 2005 and are generally in good condition, but issues with specific building systems have become apparent.

Options to provide more parking and better access to alternative transportation should be pursued. The relocation of a portion of the existing parking to a nearby site would provide space to improve circulation and expand outdoor student gathering areas. Adequate resources must be allocated towards repairs and maintenance in order to preserve the value of this asset and reduce its operating cost.

A decision has been made to renovate the facilities to current state standards. This will increase the types of instruction that can be offered at this site, allowing for more flexibility to align its use with the College’s educational planning priorities.

Planning for the Orange Education Center should be part of the larger discussion about the future of Santiago Canyon College’s School of Continuing Education. It is recommended that the future growth and instructional focuses of the School of Continuing Education be determined in Santiago Canyon College’s educational planning process. These determinations must take place before any facilities discussions, in order to frame the exploration of options for instructional facilities. The cost of upgrading the current site should be weighed against options to lease or purchase other sites.
RSCCD Goal 1
RSCCD will assess the educational needs of the communities served by RSCCD and will adjust instructional programs, offerings, and support services and will allocate resources as needed to optimize the alignment of students’ needs with services and fiscal resources.

RSCCD Goal 2
RSCCD will assess the educational needs of the communities served by RSCCD and then pursue partnerships with educational institutions, public agencies, non-profit organizations, and business/industry/labor to collaboratively meet those needs.

RSCCD Goal 3
RSCCD will annually improve the rates of course completion and completion of requirements for transfer, degrees, certificates, and diplomas.

RSCCD Goal 4
RSCCD will support innovations and initiatives that result in quantifiable improvement in student access, preparedness, and success.

RSCCD Goal 5
RSCCD will use a cycle of integrated planning that will demonstrate the effective use of resources.
The District Operations Center, which houses RSCCD Services was purchased in 1997 and opened for business in the fall of 1998. It provides a work place for many of the employees that support educational excellence throughout RSCCD. Although work takes place at all RSCCD sites, this facility provides a central place in which district employees collaborate with one another and meet with the community.

RSCCD SERVICES:
- Accounts Payable
- Auxiliary Services
- Benefits
- Board of Trustees
- Business Operations + Fiscal Service
- Chancellor’s Office
- Child Development Services
- District Construction + Support Services
- Educational Services
- Human Resources
- Information Technology Services
- Mailroom Services
- Payroll
- Public Affairs + Publications
- Purchasing
- Research
- Resources Development
- Risk Management
- Security/Public Safety
- Warehouse
The site for the District Operations Center is bordered by Interstate Highway I-5 to the northeast and is highly visible and accessible from this freeway, which is the main vehicular transportation spine through Orange and Los Angeles counties. The Center is centrally located among the RSCCD sites. It is situated between North Main Street and North Broadway, which are major connections to commercial districts and the Orange County Civic Center.

The neighboring properties to the south and to the west, which are primarily residential, include the stately homes of the historic Floral Park neighborhood.

**OBSERVATION**

- The site of the District Operations Center is visible to the community and central to the college campuses.

**ADDRESS:**
2323 North Broadway

**CAMPUSS AREA:**
6.4 acres

**BUILT AREA:**
54,784 OGSF

**BUILT ASSIGNABLE AREA:**
34,905 ASF

Source: California Community College Chancellor’s Office (CCCCO) Facility Utilization Inventory Option Net, RSCCD 2012 Space Inventory
See page 4.44 for location of the Joint Powers Training Center.
Vehicular entry to and egress from the site is problematic. Exiting by turning left onto West Santa Clara Avenue is difficult due to the speed of passing traffic. South-bound cars exiting Interstate Highway I-5 merge onto North Broadway just beyond the entrance driveway, forcing visitors to drive around to the West Santa Clara Avenue entry and turn left across oncoming busy traffic. RSCCD is considering a request to the city for alterations to the turn lane on Broadway. The vehicular entries are narrow and in need of improvement.

The existing parking count is sufficient, but additional stalls would be desirable. The parking lot is not designed well in relation to the entry and exit points. Use of the ATM machine at the north side of the Center results in parking along the fire lane that partial obstructs the driveways in the parking lot. Service vehicles also impede circulation when parked at the front and rear building entrances.

Few visitors come on foot to the District Operations Center. Two Orange County Transit Authority bus routes travel on Main Street, however buses do not stop next to the site. The on-site pedestrian circulation patterns are not coordinated with the parking layout, vehicular circulation routes, and building entry points. The building sits on a raised platform that is accessed at three points via stairs and one ramp that is located near the east building entrance. The ramp is adjacent to several accessible parking stalls.

**Observations**

- The parking lot is often almost filled to capacity.
- The vehicular entrances, driveways, and parking design can be improved for better flow and coordination with pedestrian circulation.
- Paths between the public way, the parking lot, and the building should be assessed for accessibility.
- Secure bicycle parking is not provided.

100 FEET

0 FEET
The 6.4-acre site consists of two four-story commercial office buildings, a parking lot, and landscaped edges along North Broadway and West Santa Clara Avenue. RSCCD (2323 North Broadway) and Colton Properties (2333 North Broadway) each own one of the two buildings on the property. Use of and changes to the building exterior walls, signage, parking lot, and landscaping – all of which constitute the common area – are governed by a set of covenants, conditions, and restrictions (CC+Rs).

The District Operations Center occupies the southern building and RSCCD maintains half of the parking lot. Colton Properties has recently repaved and replaced the light fixtures on their half of the parking lot. Colton Property maintains the landscaping for the entire site. They have maintained a high occupancy rate in their building.

RSCCD’s building, which contains 54,784 gross square feet of area, was cleared of hazardous materials and selectively renovated after it was purchased in 1997. The building’s exterior was recently repainted and security cameras are being installed as part of the district-wide project. Certain building components, such as the HVAC equipment, ducting, and controls, are inefficient and prone to failure. The facility is not used for instruction and is not certified as a school facility.

**OBSERVATIONS**

- RSCCD wishes to repave and replace the light fixtures on its portion of the parking lot, improve the drainage and fulfill their maintenance obligations under the CC+Rs.

- The landscaping and trees are becoming overgrown and difficult to maintain. The roots of the large ficus trees are lifting the parking lot pavement.

- The monument sign at the corner of North Broadway and West Santa Clara Avenue is aged and outdated.

- The Santa Ana winds strongly impact the building and landscaping. The large trees at the center of the vehicular turn-around at the southeast corner of the site are overgrown and bear the brunt of the Santa Ana winds.

- Many original building components in this 1970s-era building have reached the end of their usefulness. In addition, programming changes and the availability of more energy efficient systems are reasons to update the building and improve its performance and functionality.
In addition to RSCCD District-wide Services, the District Operations Center is occupied by several tenants who rent space from RSCCD. These tenants include a state senator, The Black Chamber of Commerce of Orange County, and the County of Orange Regional Occupational Programs.

The graphics on the following pages illustrate the space by use, indicating office space, meeting space, and service space. Among the functions housed in this space are the RSCCD Board of Trustees meeting room, the offices of the Chancellor and Vice Chancellors, RSCCD departmental offices, and the data center.

OBSERVATIONS

- The amount of space leased to non-district tenants can be adjusted as needs change.
- The board room and other meeting space are located on the ground floor for easy access and adjacency to the main lobby and outdoor circulation space.

The RSCCD District Operations Center is well located to serve RSCCD and the community. The facilities are well zoned and in acceptable condition, requiring periodic maintenance and the replacement of aged components as would be expected for a facility of its age. The quantity and quality of space in the facility is adequate to meet RSCCD’s needs. The ability to lease part of the space to non-district tenants affords the flexibility to adjust the quantity of space to suit changing needs.

An assessment of the condition of the site and building is recommended to identify current and future renovation needs and explore options for improvements based on an understanding of long-term costs and benefits. Due to the age of the facility, energy and water efficiency upgrades are recommended, especially for the replacement of systems that have reached the end of their useful lives. Feasible improvements to the building envelope to increase insulation and reduce solar heat gain during the warm months are recommended.

Site improvements to improve circulation flow and promote pedestrian access and safety are recommended. Strategies to reduce single-user automobile travel are recommended to minimize the need for on-site parking.

Improvements to outdoor pedestrian circulation and gathering areas should be maximized with the creative use of landscaping and enhanced paving. Potential development of plazas that can be used both for parking and for outdoor events are recommended for consideration. In order to help reduce the heat island effect, high albedo paving and smaller shade trees distributed throughout the parking lots are recommended. An overall refresh to the paving, landscaping, and signage is recommended to address issues, update RSCCD’s image, and improve curb appeal.
RSCCD Goal 1
RSCCD will assess the educational needs of the communities served by RSCCD and will adjust instructional programs, offerings, and support services and will allocate resources as needed to optimize the alignment of students’ needs with services and fiscal resources.

RSCCD Goal 2
RSCCD will assess the educational needs of the communities served by RSCCD and then pursue partnerships with educational institutions, public agencies, non-profit organizations, and business/industry/labor to collaboratively meet those needs.

RSCCD Goal 3
RSCCD will annually improve the rates of course completion and completion of requirements for transfer, degrees, certificates, and diplomas.

RSCCD Goal 4
RSCCD will support innovations and initiatives that result in quantifiable improvement in student access, preparedness, and success.

RSCCD Goal 5
RSCCD will use a cycle of integrated planning that will demonstrate the effective use of resources.
SUSTAINABILITY

COMMITMENT TO SUSTAINABILITY

SUSTAINABILITY INITIATIVES

RECOMMENDATIONS
SANTA ANA COLLEGE

EARTH DAY CELEBRATION

Wednesday, April 17 from 11-6 pm

A student-run event to raise awareness about sustainability
This chapter of the RSCCD Comprehensive Master Plan describes RSCCD’s efforts to become more sustainable and recommends a path to guide future efforts.

In 2011 the Sustainable RSCCD Committee (SRC) was established under the leadership of Chancellor Rodriguez. The membership, which is open to all interested employees of RSCCD, represents students, faculty, staff, and administration. The Committee is organized into subcommittees, each focusing on one of four areas of interest—transportation, facilities, recycling, and newsletter + communication.
The Rancho Santiago Community College District holds sustainability to be a foundational principle in its current and future development. As a responsible steward of natural resources and the environment, the district will endeavor to minimize its impact on the environment by implementing best practices for conserving resources, reducing waste, implementing energy reduction and alternative energy generation strategies, constructing efficient buildings, and by developing partnerships that will further these activities.

The board of trustees delegates authority to the chancellor to establish administrative regulations for sustainable practices in the following areas: environmental education and training; energy, waste management and recycling; resource conservation, facilities, grounds and landscape management; hazardous materials, transportation and air quality; and purchasing practices.

~Board Policy 3406, recommended by Sustainable RSCCD Committee
~April 17, 2013
The Sustainable Practices Policy BP 3406, shown on the opposing page, was drafted by the SRC and is currently undergoing review by the RSCCD Board of Trustees. Once adopted, the policy will institutionalize the mandate for sustainable development and practices.

Successful SRC efforts are raising the awareness of sustainability and fostering a culture of responsibility and environmental stewardship. Notable recent accomplishments include publishing the sustainable rsccd e-newsletter, holding the Ride to Work Day contest, demonstrating the use of LED light fixtures in campus buildings, and researching current waste management practices. The following list summarizes recent efforts.

**TRANSPORTATION**
- Partnering with the City of Santa Ana on a bike-friendly city initiative.
- Held the 2013 Ride to Work Day contest.
- Partnering with the Air Quality Management District to raise community awareness.
- Researched the student public bus pass program.
- Researching the feasibility of electric vehicles for RSCCD use.
- Researching the feasibility of campus electric vehicle charging stations.

**FACILITIES**
- Planning for energy conservation.
- Exploring renewable energy opportunities.
- Planning for water conservation.
- Developing green building design standards.
- Applying for green facilities grants and incentives.
- Participating in the California Community Colleges/Investor Owned Utility (CCC/IOU) Energy Efficiency Partnership

**RECYCLING**
- Surveyed existing practices.
- Researching best practices.
- Supporting student recycling activities.
- Fostering community partnerships.
- Improving waste management contracting.

**NEWSLETTER + COMMUNICATION**
- Publishing the sustainable rsccd e-newsletter.
- Created the committee logo.
- Held a sustainability tag line contest.
- Conducted a district-wide survey on sustainability.
- Created and updating the RSCCD sustainability web page.
- Engaging student organizations and clubs.
- Worked with student clubs to hold the 2013 Earth Day events.
RECOMMENDATIONS

A sequence of steps is recommended to build on RSCCD’s successful efforts and guide the momentum and energy that has been generated by recent initiatives.

GOALS AND PRIORITIES

Draft board policy BP 3406 prioritizes the following nine areas for the establishment of district-wide sustainability practices. It is recommended that these areas be the focus of a district-wide sustainability plan.

- Environmental education + training
- Energy use
- Waste management + recycling
- Hazardous materials management
- Resource conservation
- Facilities design + operation
- Grounds + landscape management
- Transportation + air quality
- Purchasing practices
SUSTAINABILITY PLAN

The creation of a sustainability plan that addresses district-wide and site-specific needs for each college and off-campus center is recommended. The formation of college and center sustainability committees is recommended to engage in this process and work closely with the Sustainable RSCCD Committee. It is recommended that the RSCCD Sustainability Plan be integrated into the institutional planning processes of RSCCD, both colleges, and each off-campus site, thus laying the foundation for the allocation of resources toward its implementation.

OBJECTIVES + MEASURES OF SUCCESS

The development of objectives and measures of success for each of the nine district-wide priorities is recommended for RSCCD, for both colleges, and for each off-campus site. The objectives should be site-specific with regard to opportunities and constraints and alignment with educational and facilities planning.

Measures of success should be established for each objective. These metrics should be measurable, achievable, set within realistic timeframes, and geared to the circumstances of each site. Establishing objectives and measures of success will provide clear criteria for researching and selecting strategies, initiatives, and future projects.

SELECTION + IMPLEMENTATION OF STRATEGIES

The selection of specific strategies, initiatives, and projects occurs during this step and includes detailed research into the feasibility and potential outcomes of competing options. Planning for the resources to fund faculty and staff research is strongly recommended. Once selected, strategies must be integrated into the short-term strategic planning processes that drive decision-making for staffing, curriculum, and funding to ensure that they will be implemented.
CARBON PLANNING

The draft board policy BP 3406 declares RSCCD will be a steward of natural resources and minimize its impact on the environment. In its meetings, the Sustainable RSCCD Committee has discussed the possibility of becoming a signatory to the American College and University Presidents’ Climate Commitment (ACUPCC). Signatories of the ACUPCC agree to complete a greenhouse gas (GHG) inventory; create an action plan with targets and milestones for reducing emissions; integrate sustainability into curriculum; and make their plans, inventory, and progress reports publicly available. The decision to become a signatory depends on many factors, but the actions above are recommended as part of RSCCD’s sustainability planning efforts. Carbon planning takes into account energy use, water use, waste generation and management, and transportation. A carbon action plan distills many different resource reduction efforts into a single measurement that can be used to track and demonstrate progress.
SUSTAINABLE CAMPUS FACILITIES

The oldest RSCCD facilities were constructed before 1947 when the main campus of Santa Ana College was opened. This legacy dates back to an era when sustainability was not on many people’s radar. Even so, many older buildings were designed with good solar orientation and shading and constructed with durable materials. They were built to serve many generations of students and RSCCD employees and are worth modernizing to a higher standard of sustainability. One such facility is the District Office building. The development of sustainable design standards for the renovation of existing buildings is recommended to make such buildings more efficient, cost effective, and comfortable for their occupants.

The RSCCD facilities that were built in the last decade were designed with an awareness of sustainable design. The building industry is constantly evolving to better meet the need for high performance learning and working environments. The development of sustainable design standards for new buildings is recommended. These standards should include design strategies that are appropriate for site-specific climate, soils conditions, and renewable energy potential.

A campus-wide approach to sustainable design is recommended to ensure that transportation, energy, water, waste management, and other areas of focus are addressed in a holistic manner. The current effort to provide central chiller plants for both college campuses is an excellent example of this approach.

In recent years RSCCD has been actively working to make their facilities more sustainable and less costly to operate. The graphic plates on the following pages illustrate existing and planned sustainable facilities at the main campuses of Santa Ana College and Santiago Canyon College.
OVERVIEW OF SUSTAINABLE FACILITIES

The graphic on the opposing page illustrates facilities that support sustainable campus operations using icons that symbolize the strategies being implemented. Notable among these facilities is the Central Chiller Plant, which is currently being designed and will provide chilled water for cooling the campus buildings. This and other RSCCD projects are being undertaken with Proposition 39 funds and the support of local utilities through the California Community College/Investor Owned Utilities (CCC/IOU) Energy Efficiency Partnership. The Central Chiller Plant is anticipated to significantly lower the campus energy usage and operating cost.

The Santa Ana College Main Campus is being transformed through a series of campus-wide site improvement projects. These projects are helping to improve local and regional water quality through the construction of pervious walkways and percolation fields that will help clean the storm water that falls on the campus and reduce the flow to the public storm drain system.

FACILITIES LIST

- **COMPLETED**
  - West Campus Storm Water Percolation Field
  - LED Lighting Demonstration
  - Synthetic Turf Soccer Field

- **IN PLANNING**
  - Building H - Low E Window Replacement
  - Central Chiller Plant + Building HVAC Upgrades
  - Electric Car Charging Stations
  - Buildings A, F, and R Boiler Replacements
  - Southwest Campus Storm Water Percolation Field
  - LED Building + Site Lighting Replacement
  - Campus Landscape Improvement Projects
  - Photovoltaic System Feasibility Study
SUSTAINABILITY

SITE STRATEGIES

- CENTRAL PLANT
- HIGH EFFICIENCY IRRIGATION
- HYBRID VEHICLE CHARGING STATIONS
- NATIVE/ADAPTIVE VEGETATION
- PERVIOUS PAVING
- PHOTOVOLTAICS
- SHADE TREES
- STORM WATER PERCOLATION
- SUSTAINABLE EDUCATION
- SYNTHETIC TURF

BUILDING STRATEGIES

- BUILDING INSULATION
- CENTRAL PLANT
- DAYLIGHT HARVEST
- EFFICIENT BUILDING WATER FIXTURES
- LED LIGHTING
- LIGHTING PHOTOSENSOR OCCUPANCY SENSORS
- NATURAL VENTILATION
- RECYCLING
- THERMAL MASS

OVERVIEW OF SUSTAINABLE FACILITIES

The graphic on the opposing page illustrates facilities that support sustainable campus operations, using icons that symbolize the strategies being implemented. Notable among these facilities is the 2.5-acre Coastkeeper Garden, created through a partnership with the Orange County Coastkeeper and generous donations from members of the business community. The garden, which was completed this year, is teaching the community about “California-friendly” landscaping, which conserves water and preserves the quality of our waterways and coast.

Santiago Canyon College will soon be celebrating another milestone when the Humanities Building, which was completed in 2012, is certified by the US Green Building Council (USGBC). The Humanities Building design includes a roof-top photovoltaic system, day-lighting with photo-sensors to control artificial lighting levels, low-flow plumbing fixtures, and other green building features to provide a high performance learning environment. Certification at the LEED Gold-level is currently anticipated.

FACILITIES LIST

• COMPLETED
  / Coastkeeper Garden
  / Synthetic Turf Softball Field
  / Humanities Building – LEED Gold Anticipated
  / LED Lighting Demonstration
  / Paper Collection and Recycling

• IN PLANNING
  / Central Chiller Plant + Building HVAC Upgrades
  / LED Building + Site Lighting Replacement
  / Science Building HVAC Control System + Re-commissioning
  / Building D Chiller and Boiler Upgrades
  / Irrigation of the Soccer Fields with Recycled Water
  / Campus Landscaping
  / Electric Car Charging Stations
  / Photovoltaic System Feasibility Study
SUSTAINABILITY STRATEGIES
